Thread: [Engineers needed - Earn a easy \\$1000-\\$2000! \[RUST, Cassandra, MongoDB\]](#)

CL1B - December 28, 2025, 5:26 am

We're looking for engineers for the following open tasks:

1. RUST Engineer -> Help migrate our DB service (inside Fastify Box) to it's own dedicated DB service in RUST. Schemas, tables and some core logic has already been implemented but far from operating in parity. Your job is to migrate these in parity. 40 Routes, 2500 API calls.

Reward: 1000 USD, however you want it.

2. Database Engineer -> Help migrate our MongoDB to Cassandra. 129 collections. Like said: Schemas and tables etc have been prepared but proven non functional in practice. This is due to our lack of knowledge in this field. Your job is to not only help achieve parity but also advice us on key DB design (Hot paths etc)

Reward: 1000 USD, however you want it.

Requirement: Have a portfolio or graduated in relevant field.

You can send your application directly to me via PM/Convo.

For the quickest response email me at marlboroman@hackforums.net
