Thread: [Item Check Tool in orders 4Price shop **](#)

User2006 - December 28, 2025, 8:01 pm

Item Check is a powerful verification tool that allows buyers to test the validity of their purchased items directly from their orders page. This feature ensures that your purchased accounts (cPanel, Shell, SSH, RDP, SMTP, Mailer, Webmail) are still active and functional after purchase.

How It Works

[Video: <https://www.youtube.com/watch?v=vtFxepqtgow>]

1. Purchase Checks Package: Buy a package of 20 checks for just \$5
2. Go to Orders: Navigate to your "My Orders" page
3. Click Check Button: Find the "Check" button next to any eligible order
4. Get Instant Results:

Working (Green) - Item is valid and functional

Not Working (Red) - Item is no longer valid

Supported Item Types

Type Description

cPanel Web hosting control panels

Shell Web shell scripts

SSH Secure Shell access

RDP Remote Desktop connections

SMTP Email sending servers

Mailer PHPMailer scripts

Webmail Email accounts (Zimbra, Roundcube, OWA, etc.)
