Thread: [Just Read This! \(Zphisher\)](#)

EUL3 - December 30, 2025, 10:47 am

Hello,

How do i make my example Zphisher link to instagram, google, steam etc not that suspicious?

Some background in me (cause i am a new user) I know python very well and some C++ and C. I am not that typical script kiddie i do not use tools (Github) that much cause i think thy are a waste of time. But this tool seems cool cause you can steal victims ip and logins, and i am not good making websites other than with HTML.

ANYwaY BYE!

Edit the code to make it more unique. Don't use blacklisted domains. Block Safe Browsing bots and similar.

Only a script kiddie would find Zphisher cool.

I have tested it and finded out it is a skid tool. I like to make my own tools and scripts not that shit? cause

1. They are mine and they work better, and I learn.

yep just 1 reason, cry about it.
