Thread: [Custom Software Development Services Python, Node.js, React, Vue \(Flexible Pricing\)](#)

IndifferentPerson - December 30, 2025, 4:58 pm

I'm offering professional software development services focused on building reliable, scalable, and maintainable solutions tailored to real-world business and technical needs. Whether you are an individual founder, startup, or established company, I can support projects at any stage—from early prototypes to production-ready systems.

Core Technologies

I specialize in modern, widely adopted stacks:

Backend Development

Python (APIs, automation, data processing, backend systems)

Node.js (REST APIs, real-time services, microservices)

Frontend Development

React (SPAs, dashboards, complex UI logic)

Vue.js (lightweight apps, admin panels, interactive interfaces)

Full-Stack Solutions

End-to-end application architecture

API design and integration

Database modeling and optimization

Secure authentication and authorization flows

Types of Work I Handle

Custom web applications

SaaS platforms and MVPs

Automation scripts and internal tools

API development and third-party integrations

Performance optimization and refactoring

Bug fixing, maintenance, and feature expansion

Code reviews and technical consulting

Quality & Approach

I focus on:

Clean, readable, and well-structured code

Scalable architecture suitable for growth

Security-conscious development practices

Clear communication and realistic timelines

Documentation where it matters

I don't just "write code"—I aim to understand your requirements and deliver solutions that are practical, efficient, and maintainable over time.
