Thread: [Software engineer](#)

CYBERWAR WEAPONS - January 7, 2026, 4:45 pm

I work with AI, and can make automations for your website or company. I know how to make custom AI, create apps and websites and even desktop programs. I can write RATs, Botnets, Stealers, Zerodays, and do almost anything in software engineering. I've been in this field for 10+ years.

DM or start a contract with work details. I won't charge much because I'm doing this for fun.

Terry A. Davis - January 7, 2026, 6:03 pm

I don't mean to call you out here, but I am curious, what zero days have you got that you don't want to just take to the vendor to get bug bounty pay out?

I have no Zerodays at the time but I had one discover and reported no bounty paid though. I can find them fastest when given a target.

I'll throw some money at a latest iOS jailbreak.
