Thread: [Python SQL Injection Exploitation Tool EASY](#)

brian911 - January 9, 2026, 7:31 pm

My SQL injection Attack Tool

Features

- ? Detect SQL Injection vulnerabilities
- ? Support for GET & POST parameters
- ? Database enumeration
- ? Table & column listing
- ? Dump database data
- ? Interactive command menu
- ? Custom SQL queries
- ? Organized session output folders

? Requirements

You need the following to run the tool:

? System

Linux / Kali Linux recommended

Python 3.6+ installed

? Python Dependencies

Install with:

pip install requests colorama

? External Tools

Make sure you have sqlmap installed:

sudo apt update

sudo apt install sqlmap

? Installation

Clone the repository and set permissions:

? Usage

? Run the tool interactively (The Best Way)

python3 SQLi_KSA.py

You will be prompted to enter a target URL and choose GET or POST parameters for testing.

I'm not fond of your over reliance use of ChatGPT to make this.

If it wasn't ChatGPT, it was certainly AI, those Emotes scream it.

Your github doesnt even exist lol

K4RM4 - January 13, 2026, 3:21 pm

really?? lol

tek cortom - January 26, 2026, 9:10 pm

it works fine, just confused about the setup process. in particular this part

>> POST parameter name:

>> POST parameter value:

what should go there? your readme does not even mention this.

Chornaya Magiya - February 2, 2026, 12:42 am

This tool is just a basic wrapper around sqlmap with a prettier interface.
