EDU-SPTT v1.0 - Security Penetration Testing Tool ?

Hey folks, keeping it real here. This is a simple Python script I put together with AI assistance to help beginners learn security basics. It's not fancy or perfect, but it works for learning fundamentals.

? Transparency First:

Priced at just \$2.5 USD - basically coffee money

What it actually does:

Basic port scanning on your local network ?

Checks for common web paths ?

Shows simple exploit examples (educational) ?

Collects basic system info ?

Saves encrypted data files (demo) ?

Creates simple HTML reports ?

No false promises:

? IS a professional penetration testing tool

? IS for real-world hacking

? IS guaranteed bug-free

? IS for learning basics

? IS safe for home labs

? IS simple to run

Price: \$2.5 USD (Bitcoin only)

Why pay \$2.5?

Helps fund future improvements

Cheaper than most coffee drinks ?

You get lifetime access

Download after payment: I'll send the file after Bitcoin confirmation. Usually within 24 hours.
