Thread: [Can you change what is displayed via the android camera?](#)

MadScientist - January 21, 2026, 5:57 am

Is it possible to change what is being displayed by an android camera regardless of what its pointed at?

IE your cameras facing a tree, but displaying something completely different in the app?

Rahul007rhp - January 21, 2026, 6:50 am

Never heard or thought about it , but i bet there would be something as the AI buzz has taken over.

GoGreen - January 21, 2026, 7:01 am

Might be possible to install virtual driver in android and use i as main camera. I am sure have seen this before will search and update here

The Pact - February 3, 2026, 10:34 am

I think it might be possible to install a virtual camera driver on an Android device, which would let you use the Android phone as the main camera for other apps or devices.

Basically, this would mean setting up a virtual camera on the Android that can send video feed to other software, making it appear as if the phone is a regular camera connected to a computer or other device. I believe I've seen this kind of setup before, so you should plan to do some searching to find out more about how it works and if there are any apps or tools that can help you with this. Once you find the relevant information, you can update Hack Forums with what you've learnt and how to proceed.
