Thread: [Free remote access Trojan capable of mining Crypto either bitcoin or ethereum?](#)

Borris5ranked - January 23, 2026, 11:23 pm

Any free rats that can be installed on a laptop capable of mining bitcoin or ethereum? Needing the money to buy/pay off spyware tools.

DramaKing - January 24, 2026, 9:50 am

Any that do are forgettable. As I like to say, you'll probably spend more on crypts than you'll get in profits. With Monero skyrocketing, maybe things have changed.

possessed-client - January 24, 2026, 12:51 pm

I understand the desire to simplify things into a single payload, but there are multiple modified xmrig projects with maintainers in this forum, those are a very decent option, though you'll have to manage the C2 and miner separately in a way of your choice.

Your biggest problem is getting onto machines to mine, while avoiding botkillers and other miners. As long as you can create or find WD exclusions for your payloads, any old crypter should do that can get the initial foothold. But imho the hardest long-term problem you'll need to focus on is spreading or finding dependable spreading services.

Oh yeah, you don't want BTC or ETH, those are unprofitable for CPU/GPU miners in comparison to algos focusing to be competitive for CPU (rx/0) or GPU (KAWPOW). Exchanging cryptocurrency is easy anyway.

Yeah, Bitcoin mining on PC likely won't get you a cent. Just finding software for it these days ought to be difficult. Ethereum cannot be mined.

Polaris Web - January 26, 2026, 12:31 pm

it's never late for anything, learn socket programming, make your own basic RAT, but write all by your hands, don't use AI cuz it doesn't understand about sockets yet prob will get you non stable stuff, then get any ravenminer software find from google and make DLL plugin native code it in a way to controll it from your RAT. Profit.

if you want profit from minning, you must have EV and private spreading method to spread only to gamers, youtube/google won't get you anywhere, good luck!

Zoroffm - March 29, 2026, 7:45 am

I'm looking for mining bot

Ok. I saw the corvovs miner a couple of times. How much does this modified version make?

Do I need a crypter and loader for my silent miner? And would I need a botnet for my silent miner? My silent miner being unam sanctam and like miner.

How profitable is this miner? Ravenminer?
