Thread: [Fraud GPT? Phishing pages for simulation?](#)

JulienLaRoch - January 28, 2026, 9:46 am

Doing research on phishing pages..... Set up evilginx... tried these all detected.
bought fraudgpt to make pages and having trouble setting up cloaker they all come with these redpages when loaded on chrome...

not sure what to do here..... sorry total noob.....
not a innuendo either about setting up a sim... lol legit doing research...

Binance - January 28, 2026, 9:53 am

Cool. There's 100 different versions of this shit now. Even WormGPT isn't the original anymore (some blowhard ackbar is selling his "Version" here on HF), so many people try to piggy back off the names that were big and buzzy in 2023.

I used this before for research, did you buy it from <https://t.me/fraudgptsales> ?

If so, They use cloak.it which requires .js redirect on your index page under public_html . Gets your domain quickly bottled and blacklisted though so it's good for like 24 hours lol.

It's not great GPT software and most of this shit will get you detected and flagged quickly. I wouldn't say it's good for practical use if that's what you're implying.

There's no way that you obtained the actual FraudGPT. You obtained a fake clone.

Evilginx should not be automatically detected if the domain was clean.

it's all crap, even the original created by bert. best to invest in claude or cursor if you're really that hard up.

idk i bought this and it was ok but ur right... not exactly revolutionary...
not sure what i expected... but worth it for the internal hosting

do u think its weird a service does all the hosting for u?

ShellPower - February 10, 2026, 9:32 am

Phishing make a user connect to a specific site, while not intending to do so in the first place... SE should be on point i wouldn't waste time on the technical part but think of something more "threatening" if that's a pentest

JulienLaRoch - February 19, 2026, 11:48 am

okay... like user account ato...? not sure what can be more threatening.....

DriftMetrics - March 4, 2026, 11:46 pm

If you're doing research, it's better to focus on studying how detection systems work and test things only in controlled lab environments to understand security better.

Unfortunately you are really dumb. Have you checked the source code of the page ? having a script tag with 2 comments in it

```
Code // Hardcoded user accounts - add new accounts here
// To add a new account, copy the template below and fill in the details:
And it has some sample accounts xD
```

it doesnt have a clearnet site so .app , .chat and .org are all not the actual iteration op was speaking of.

I see what youre talking about now.

Most likely yeah, I was only referring for that instance, people are not even trying to clone it properly, with a little bit of research and you can see it's an AI slop.
