Got it! Please provide your honest review. There are improvements that could be made and trust we will implement your suggestions (after review of course).

Redbaron223 - February 12, 2026, 1:09 am

Has anybody tested this?

NCORE Tech - February 12, 2026, 5:09 am

Is it like a RAT? Can i test it before buying? Im highly interested.

Hey, this is a remote access tool with some limitations. You do not have direct access to the iPhone's shell , etc. TrackPro+ utilities shortcuts and shortcut actions to take advantage of automations to allow for remote access and remote control. You can sign up for free, and link a device for free. You cannot remotely control the device for free or use the replay feature, but you will be able to track the current location of the device. I would suggest trying the base membership first to try it out.

Yes, please review my previous thread titled "Vizionware.app" you will see more than a few reviews of users that use TrackPro+ daily.

VIPcrafter3 - February 27, 2026, 2:26 pm

I'm having an issue getting it setup on the phone I've imported the shortcut thing and ran it and it gets stuck like 5/6 of the way thru.

Hey, send me a PM. Let's troubleshoot the issue.

VIPcrafter3 - March 1, 2026, 5:43 pm

So I downloaded the file for iphone. i went in and opened it up and it asks for a bunch of permissions and gave me the confirmation code and put the thing in shortcuts. I than clicked it to let

it run and it gets almost done and just gets stuck at the very end and never finishes. It also doesn't appear to be working right currently either because the gps location isnt even remotely accurate. Instead it is showing the location of where I was when I first opened it hours ago. I am planning to buy the 25\$ sub plan but am worried it might not be working in all honestly...

Hey, we were able to follow up via PM. I do understand that you are now able to use the tool and all is working with the current plan. Thank you for your patience and willingness to learn.

This reply is incorrect. I gave up on fucking with it because it failed to fully set itself up. and CONSTANTLY had popups trying to reauth.
