OpenVision 3 Challenges the Need for Separate Vision and Image Generation Models

OpenVision 3 demonstrates that a single visual encoder, using a unified tokenizer, can effectively power both image understanding and image generation tasks across multiple model sizes.

That's a big feat. We are behind vision related tech with regards to AI.

I have used the popular AI video vision mode and it's pretty awesome how it can analyze anything almost real time and talk with you. Commentating on the world it sees. That has great future ahead.
