Thread: [How are you using and or monetizing Clawdbot / Moltbot / Openclaw](#)

Digital Plug - February 9, 2026, 1:04 am

I've spent most of today getting mine set up properly — locked down, secure, and actually usable. I'm genuinely excited to learn more about it. It really feels like one of our first small tastes of something close to "AGI".

That said, I've also seen the endless Instagram reels selling pipe dreams around it, and yeah... most of that is obvious BS. Still, there has to be real, practical value here beyond the hype.

I'm curious how you're actually using it in your day to day work or life. And even more so, are any of you monetizing it?

I've had a ton of ideas bouncing around, from AI content TikTok Shop to SEO & website building. Would love to hear what's working for you, what isn't, and what you've learned so far.

Looking forward to hearing your experiences. Cheers.

SIM-2470866 - February 9, 2026, 3:35 am

I've been messing around since the day it came out and honestly it is very useful, you can actually set it up to sound more like Jarvis and as far as the use-case goes it has endless possibilities.

I've been using it with automating my own things, pretty much anything that needed my input is not being automated by OpenClaw.

Now I've moved on to setting up an automated cold calling through OpenClaw with real-time conversation hopefully.

However a few concerns, theres still alot of bugs and problems with it and somehow I always hit an API reached its credit or limit (even tho the prompts or tasks they are doing is cheaper elsewhere) could be something I did so will dig deeper but overall I'm enjoying this new tech as it really helps

Many more to come! Everyone is adopting and there's currently a convergence with crypto + AI / "claw" agents

see: <https://github.com/daydreamsai/dreaming-claw/releases/tag/v2026.2.15.daydreams.4>

By end of year we will see more and more agents transacting autonomously between each other

Build for the agents!

Porn - February 19, 2026, 5:31 pm

What are you guys using as the network interface? sim/hotspot? I have some ideas but it should never touch my real network or ip and anything behind a vpn or cheap proxy is useless.

Raijin - June 17, 2026, 5:28 pm

I am using OpenClaw as my own personal AI agent. It's nice.
