=====ENG=====

I'm selling my hidden miner. It's a great way to monetize your traffic.

Written in Rust, 64-bit. Supports CPU mining for XMR and GPU mining for RVN.

What features does the software have:

1. Automatic restart if the process is killed
2. Stops mining when opening programs that allow you to track the load and monitor processes (this feature can be disabled if desired)
3. Hiding the miner process as a legitimate process
4. Fixed on computers
5. Controllable system load (percentage during activity/AFK, time during which the bot will be considered AFK)

The software has three versions:

- 1. CPU mining only, does not depend on third-party servers (approximately 7 MB)
- 2. Mining on CPUs and GPUs, requires a server (the server is used once during the first launch to give the bot a core for GPU mining. The server will not be needed on subsequent restarts; if the server is banned or crashes, your miners will not disappear. (approximately 10 MB)
- 3. Mining on CPUs and GPUs, a mining core It's built directly into the build, doesn't require any servers, and isn't dependent on them (approximately 100 megabytes).

In fact, the software doesn't require a server for long-term operation.

It's important that the cryptography, file delivery, and traffic are the responsibility of the client; I provide the tool.

Price:

One-time payment of \$500, each rebuild is \$50 (three rebuilds are included with the license purchase). There's no additional charge for updates. If you'd like to work for a commission, please contact us and we'll discuss it.

Your current contact information is always available here:
