CrySome RAT – Next Generation Remote Access

Hey everyone!

After months of development and real-world testing, I'm proud to release the new era of CrySome RAT. This is not a copy-paste job – it's a complete C# / C hybrid with UDP/QUIC transport, built for speed, scale, and stability. No AI slop, no unstable garbage.

If your current RAT chokes at 100 victims, you're wasting money. CrySome handles 10.000+ victims with ease. Long-term usage, long-term support – you're buying professional software with professional support.

- ? Pure C# WPF / .NET 9.0 server
- ? RUDP + QUIC listeners (TLS optional)
- ? Full Windows & Linux victim support

Supports

Windows XP / Vista / 7 / 8 / 8.1 / 10 / 11 – Linux (Ubuntu / Arch)

CrySome Server – Complete Feature Overview

Modern WPF control panel with multi-listener architecture, real-time telemetry, and advanced victim management.

Victim Management (Grid)

- Real-time data: IP, country flag, username, OS icon, active window title, smoothed ping, uptime
- Idle reporting: mouse/keyboard idle (color-coded), GPU info, custom tags & groups
- Workspaces: create named tabs, assign victims, rename/delete workspaces – persists in workspaces.json
- Tag filters & blocklist: block IPs directly from context menu, add/remove blocked IPs
- Quick stats bar: victim count, unique countries, average ping, distinct window titles
- Batch actions: screenshot all selected, send command to all, move to workspace, assign tags

- Quick toggles: UDP Monitor panel (animated packet lanes, throughput, RTT, packet loss %) + Filters panel

Networking & Listeners

- Multiple independent listeners (RUDP legacy port + QUIC TLS port) – start/stop per listener
- Victim row shows which listener accepted the connection
- Automatic blocklist enforcement on connect
- Optional Telegram notifications on new victim (token, chat ID, test message)
- Connect/disconnect Windows sounds (toggle in settings)

Activity Log

- Newest-first log with timestamps & categories: All | Connections | Commands | System
- Color-coded entries, hide specific categories via text filter
- Export log to file, pause UI updates, mirror to disk

Remote Operations (Context Menu / Toolbar)

- Send command (PowerShell / cmd) – single or all selected victims
- File transfer (up to configurable MB) – send to single or all
- Direct link / URL push – victim downloads + executes
- SOCKS5 reverse proxy toggle – multi-victim proxy with aggregated results
- Screenshot (JPEG viewer)
- Process manager – list, kill, search processes
- Credentials harvesting: passwords / cookies / autofills / full dump -> dedicated viewer
- Remote Shell, Remote Audio, Remote Camera, Remote Desktop (JPEG with adaptive quality)
- HVNC (hidden desktop) with mouse/keyboard control
- Keylogger – live buffer + offline capture viewer
- Remote chat (two-way)
- WhatsApp & Telegram session archive recovery (zip extraction with progress UI)
- Restart victim agent
- Uninstall victim – removes from grid instantly
- Copy victim summary, pin to top, per-victim notes, mute notifications (e.g. 30 min)

Bottom Toolbar

- Start/Stop all listeners, SOCKS5 shortcut, Screenshot shortcut
- Open Builder, Listeners window, Plugin Manager, Settings
- Panel toggles (Monitor / Filter), live victim count, server status

Payload Builder

- Set C2 host/IP, port, victim group label
- Select stub binary, optional icon, parent spoofing preset
- Edit assembly metadata (title, description, company, version) or randomize
- Feature flags (toggle what the stub includes): remote command, file transfer, screenshot, file manager, process list, restart, proxy, remote desktop, HVNC, credentials, keylogger, chat, microphone, camera, persistence, survival mode, AV killer suite (admin), self-protection, obfuscation
- Live build log output

Settings & Plugin Manager

- Default ports (RUDP/QUIC), victim info polling interval, max endpoints, max file size
- Notification sounds, Telegram integration
- Logging: pause UI, mirror to file
- Plugin Manager – searchable list of context-menu features, enable/disable per feature (persisted)

Persistence & Automation

- On-connect auto tasks: run command or push file when a victim connects
- Large file transfer with SACK protocol, session zip receivers with progress window
- Credentials / screenshot / desktop / HVNC frames, audio chunks, camera frames all routed to appropriate viewers

Operator Quality of Life

- Toast status messages, clipboard utilities, export logs / victim summaries
- Localization (multiple languages in Resources)
- Persisted data: settings.json, listeners.json, notes.json, pinned.json, blocked.json, muted.json, snippets.json, autotasks.json, contextmenu_features.json, workspaces.json, victims.json

20+ features. Modular builds. Clean FluentWPF interface.

Why CrySome?

- No AI slop – human-written, stable, fast
- UDP + QUIC – low latency, handles unstable networks better than TCP
- Long-term updates & support – you're not buying abandonware

Couch Copy available to everyone!

LINUX VERSION IS CURRENTLY ON UPDATE.

Interested? PM me or start a contract below. I deal only on HF.

CrySome RAT comes with the best crypter. Not a joke.

BIG VOUCH !

Being developed in Delphi already puts it a level above many other tools in terms of stability and performance.

The implementation using UDP shows a strong understanding of efficient communication and speed optimization.

From my personal experience using it, the software is fast, stable, and works exactly as it should no crashes, no random issues, just smooth performance.

Beyond the software itself, the developer is professional, supportive, and clearly experienced.

Highly recommended !!!

Sicario P - February 12, 2026, 11:29 am

I had the opportunity to test the software, and here's the technical summary:

Build Fidelity: The test version is a 1:1 match to what's shown in the sales thread. There are no discrepancies in the UI or execution times.

Performance: The program runs natively and smoothly. The processes of [mention a key function, e.g., module loading/sockproxy] are consistent with the logs provided by the developer.

Stability: Zero memory leaks or unexpected crashes during the test session. The code appears clean and well-optimized for the described environment.

Verdict: The program strictly adheres to its promises. Recommended for those seeking technical reliability.

dmed ?

Polaris Web - February 13, 2026, 2:49 pm

CrySome 0.2.1x Update

? Well Here Are The Fixes

For Performance I Was Using Wait/Sleep Too Long, I Have Put It Back For 10 Seconds, Same As Refresh and Throttle Also Ping

I Have Replaced Queue With A Normal Disconnection So We Can See Disconnections Faster Without Disturbing HeartBeat, Also Changed HeartBeat From 3000 ms to 1500.

When I Was Using Proxy Socks5 I Have Leaved Debug On Terminal, But Now Have Removed The Debug. But Instead Added Proxy Column Easily See On Which Victim You Are Running Proxy.

Now You Can Start Proxy Socks5 On All Victims Or On Selected Ones At Once, Also You Can Stop All Proxies At Once.

Voidlight - February 14, 2026, 6:24 am

(Feb 16, 2026 01:35 AM)Transporter007 Wrote: [\[CITE\]](#) Any vouch copy left ?
Left Of Course.

martigo333 - February 16, 2026, 12:54 am

I would appreciate a vouch copy.

greatgatsby - February 16, 2026, 3:24 pm

I've been testing the software for a few days, it's works as described

I appreciate the support and the prompt updates

Added it to my weapons depot, will soon crypt it then join the combat.. Let's wait and see what happens

Anyway, hopefully this project will maintain its sustainability and support even as the number of users increases.

SixTeeB - February 17, 2026, 4:10 am

Please send the "Couch Copy" to me via direct message

Purchased this rat, and it's one of the trashiest rats I've ever used.

Functionality is 0. Waste of money.

Besides that, seller is either bipolar or has some mental issues as it seems like I'm talking to 10 people during the day.

He doesn't even know how his rat works, which proves this is just one more project made by AI.

Seller is a liar, will promise you everything until he takes your money, and after that, mentality changes completely.

DO NOT deal with this user.

Also, seller also likes to delete chats and try to hide evidences so make sure that you have Ayugram or anything else that has anti-delete feature, otherwise this person will scam you.

Seller has also promised the update that he will provide, and then he ran away without sending it, evidence in DM if you need

Seller is a scammer. You can lie here all day you want, I have evidence and can share it easily.

(Mar 3, 2026 11:20 AM)Polaris Web Wrote: [\[CITE\]](#) Thanks For Your Review. But You Were So Happy With The Product. You Can't Command Me To Add Features, To Add Admin Panel For You And For Your Team. You Shouldn't Disrespect Me Either Now.

Sorry To See You Go.

It's funny that you screenshot and even show the part where you removed entire chat :D pathetic scammer I didnt command you to do anything, you were paid for all the features you did, and the

funny thing is you didnt even provide them but haven't even sent the tool :D I wouldn't use it anyways cus I saw how trash is it. You can call as many of your "customers" to lie here for you. The truth hurts as I can see, and when it comes to customers, there are no customers, it's just your pathetic friends trying to lie here in order to repair your reputation.

Also "You were so happy with the product"? Dude this product is totally trash. nothing you did works properly, you made it unkillable and i was able to kill it via task manager... Where are basic skills?

The fact is that you're a lowlife scammer.

Also I didn't "beg" you for anything. Your rat costs 200\$ for 3 months which is 66\$ per month, and I paid 40\$ as you wanted to sell it for 40\$ (even tho later you got over 50\$ more), and let's be honest, this trash isn't worth 20 bucks. Even webrat is hundred times better than this.

Even the stealer you're selling is using watermark in .txts from a completely different stealer from 2020 which just proves you're a skid with AI.

Everything you made is entirely broken, you can't even understand that your rat is installing itself as crysome.client yet you think that resource hacker will change anything on the build itself.

Braindead kid using ai thinks he's smart.. Funny.

For ANYONE who considers buying this trash, if you buy it, and get scammed like I did, it's completely on you. Keep in mind you were warned.

Seller promises so many stuff, and then his bipolar disorder kicks in and he removes chats entirely and try to hide evidence. Sad & poor lowlife.

Rival37 - March 4, 2026, 4:53 pm

Probably one of the friendliest people I've met on this site so far. I bought his product and he was very communicative and respectful. The product was as expected, he even went to extents to show it to me in LIVE form and what it is capable of doing. The client on its own is very smooth and responsive and very easy to navigate. Had one slight issue and he offered to immediately help fix it and was able to resolve it. Thank you once again for the help man and your kind gestures :)

MikeJohnLong - March 10, 2026, 3:13 pm

Be extremely careful with this user, I did some deals with him, he will send you fake projects. I gave him \$800 for the source code of his rat named Prismora. He agreed I would receive HVNC & Wallet injections. After I paid him the \$800 he was taking too long to send it so I was getting worried and told him I would donate him extra after he gave me it (never specified an amount). Days later of sending me fake projects he tells me I need to pay him \$150 NOW because he needs it. I kept asking him what he needs it for? He just kept insulting me telling me I will be blocked unless I pay it, and he raised it to \$250 because I asked what he needed it for (keep in mind I offered to give him extra \$ once he sent me the real project out of my generosity and he somehow warped it into me having to pay \$250). I have proofs of everything if anyone wants to see them I can show the screenshot. Although he probably wont be banned here since I didn't do a contract for this deal, im just warning others to be careful since he will 100% scam to buy drugs when he gets the chance.

Also you can check im not making this up i have a completed \$2k contact with him on his Evelyn Stealer post.

Rival37 - March 10, 2026, 4:44 pm

Basilisk - March 12, 2026, 5:03 pm

OP was kind enough to provide me with a test.

First of all I wanted to say I was surprised by both quality and versatility of the product - it has all the features you can imagine, built in crypter, and the interface is clean and easy.

Set up is regular for this type, and so it was. He provided support for that as well.

The stub is small in size, FUD, and can you have a lot of features turned on and off, and it still will be decent.

The quality is indeed superior to many others on the market, the HVNC module was fast, without any lags and was flawlessly executed.

Same for many other, like remote commands, manual file upload so on.

This guy knows what he is doing, without any doubt.

This isn't a copy paster product, this is a refined tool for people who want the absolute best.

Wish you the best with sales, I will personally watch this and the sellers future products.

Stanley - March 17, 2026, 12:48 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

leetboi - March 17, 2026, 8:35 pm

Great product! Everything works exactly as described and all features are functioning perfectly. The software runs smoothly without any issues. The support is amazing and responds almost instantly. I'm very satisfied with my purchase and would definitely recommend this seller to everyone :))

CrySome RAT – Next Generation Remote Access

Hey everyone!

After months of development and real-world testing, I'm proud to release the new era of CrySome

RAT. This is not a copy-paste job – it's a complete C# / C hybrid with UDP/QUIC transport, built for speed, scale, and stability. No AI slop, no unstable garbage.

If your current RAT chokes at 100 victims, you're wasting money. CrySome handles 10.000+ victims with ease. Long-term usage, long-term support – you're buying professional software with professional support.

- ? Pure C# WPF / .NET 9.0 server
- ? RUDP + QUIC listeners (TLS optional)
- ? Full Windows & Linux victim support

Supports

Windows XP / Vista / 7 / 8 / 8.1 / 10 / 11 – Linux (Ubuntu / Arch)

CrySome Server – Complete Feature Overview

Modern WPF control panel with multi-listener architecture, real-time telemetry, and advanced victim management.

Victim Management (Grid)

- Real-time data: IP, country flag, username, OS icon, active window title, smoothed ping, uptime
- Idle reporting: mouse/keyboard idle (color-coded), GPU info, custom tags & groups
- Workspaces: create named tabs, assign victims, rename/delete workspaces – persists in workspaces.json
- Tag filters & blocklist: block IPs directly from context menu, add/remove blocked IPs
- Quick stats bar: victim count, unique countries, average ping, distinct window titles
- Batch actions: screenshot all selected, send command to all, move to workspace, assign tags
- Quick toggles: UDP Monitor panel (animated packet lanes, throughput, RTT, packet loss %) + Filters panel

Networking & Listeners

- Multiple independent listeners (RUDP legacy port + QUIC TLS port) – start/stop per listener
- Victim row shows which listener accepted the connection
- Automatic blocklist enforcement on connect
- Optional Telegram notifications on new victim (token, chat ID, test message)
- Connect/disconnect Windows sounds (toggle in settings)

Activity Log

- Newest-first log with timestamps & categories: All | Connections | Commands | System
- Color-coded entries, hide specific categories via text filter
- Export log to file, pause UI updates, mirror to disk

Remote Operations (Context Menu / Toolbar)

- Send command (PowerShell / cmd) – single or all selected victims
- File transfer (up to configurable MB) – send to single or all
- Direct link / URL push – victim downloads + executes
- SOCKS5 reverse proxy toggle – multi-victim proxy with aggregated results
- Screenshot (JPEG viewer)

- Process manager – list, kill, search processes
- Credentials harvesting: passwords / cookies / autofills / full dump -> dedicated viewer
- Remote Shell, Remote Audio, Remote Camera, Remote Desktop (JPEG with adaptive quality)
- HVNC (hidden desktop) with mouse/keyboard control
- Keylogger – live buffer + offline capture viewer
- Remote chat (two-way)
- WhatsApp & Telegram session archive recovery (zip extraction with progress UI)
- Restart victim agent
- Uninstall victim – removes from grid instantly
- Copy victim summary, pin to top, per-victim notes, mute notifications (e.g. 30 min)

Bottom Toolbar

- Start/Stop all listeners, SOCKS5 shortcut, Screenshot shortcut
- Open Builder, Listeners window, Plugin Manager, Settings
- Panel toggles (Monitor / Filter), live victim count, server status

Payload Builder

- Set C2 host/IP, port, victim group label
- Select stub binary, optional icon, parent spoofing preset
- Edit assembly metadata (title, description, company, version) or randomize
- Feature flags (toggle what the stub includes): remote command, file transfer, screenshot, file manager, process list, restart, proxy, remote desktop, HVNC, credentials, keylogger, chat, microphone, camera, persistence, survival mode, AV killer suite (admin), self-protection, obfuscation
- Live build log output

Settings & Plugin Manager

- Default ports (RUDP/QUIC), victim info polling interval, max endpoints, max file size
- Notification sounds, Telegram integration
- Logging: pause UI, mirror to file
- Plugin Manager – searchable list of context-menu features, enable/disable per feature (persisted)

Persistence & Automation

- On-connect auto tasks: run command or push file when a victim connects
- Large file transfer with SACK protocol, session zip receivers with progress window
- Credentials / screenshot / desktop / HVNC frames, audio chunks, camera frames all routed to appropriate viewers

Operator Quality of Life

- Toast status messages, clipboard utilities, export logs / victim summaries
- Localization (multiple languages in Resources)
- Persisted data: settings.json, listeners.json, notes.json, pinned.json, blocked.json, muted.json, snippets.json, autotasks.json, contextmenu_features.json, workspaces.json, victims.json

20+ features. Modular builds. Clean FluentWPF interface.

Why CrySome?

- No AI slop – human-written, stable, fast
- UDP + QUIC – low latency, handles unstable networks better than TCP
- Long-term updates & support – you're not buying abandonware

Couch Copy available to everyone!

LINUX VERSION IS CURRENTLY ON UPDATE.

Interested? PM me or start a contract below. I deal only on HF.

CrySome RAT comes with the best crypter. Not a joke.

FIRST!! Start Contract For CrySome

~ PURCHASE FROM OUR WEBSITE AUTO : <https://crysome.net/~>

Prices

\$250.00 USD – 3 Months Access (Free Updates & Support, Full Download Access)

\$750.00 USD – Lifetime Access (Free Updates & Support, Full Download Access, Source Code Included)
