Thread: [Download Unlimited Spotify Music Bulk As Mp3!](#)

hashsha_0110 - February 14, 2026, 2:02 pm

I wanted to download a ton of songs from my spotify playlist and i couldnt find any sites that would let me download all 100+ Songs without paying...

Alot of the fully free ones are extremely slow download speed and they are low quality audio files. So i made this super simple script set to download playlists. You have to do them 100 songs at a time or less but you can just refresh the site add another 100 songs from a playlist. You could also just get a list of 100+ urls from a spotify playlist data extractor like:

<https://www.spotlitr.com/export/spotify-playlist> but you would have to modify the code or make a script to add the ids to the fetchedid list which wouldnt be hard.

Step 1:

Go to <https://spotmate.online/en1> and add the playlist url and click enter.

Step 2:

Go to the console (Open inspect element) and paste the following scripts in order (PLEASE WAIT FOR THEM TO COMPLETE. Script 2 takes a bit to send requests because of rate limiting):

SCRIPT 1:

Code // Make buttonIds a global variable

window.buttonIds = [];

const tracksDiv = document.getElementById('tracks');

if (tracksDiv) {

const buttons = tracksDiv.querySelectorAll('.row .col-6 button');

window.buttonIds = Array.from(buttons)

.map(button => button.id)

.filter(id => id); // Remove empty IDs

console.log('? Global variable "buttonIds" created!');

console.log('Button IDs found:');

console.log(window.buttonIds);

// As a copyable array

console.log('\nCopyable array:');

console.log(JSON.stringify(window.buttonIds));

// As a simple list

console.log('\nSimple list:');

window.buttonIds.forEach((id, i) => console.log(`\${i + 1}. \${id}`));

console.log('\n? You can now access this list anytime by typing:');

console.log(' buttonIds - to see the array');

console.log(' buttonIds.length - to see count');

console.log(' buttonIds[0] - to see first ID');

```
} else {  
  console.log('Tracks container not found');  
}
```

SCRIPT 2:google.com/file/d/1fXz9puOI_QzZCZdyXGbXVvaTW4wcx5T-/view?usp=sharingscript
[2.txt](#)

SCRIPT 3:google.com/file/d/14SRAPtwKv_QZfPuyv9qW_pMbXiP4lxNH/view?usp=sharingscript
[3.txt](#)

Step 3:

There should be a button called download file links txt. Click that.

That will download a list of mp3 downloads

From there make sure to open all of those as tabs

I personally just used a chrome extension that allows me to open a list of urls as separate tabs.

Note: This is currently working for my specific situation. This is just a half-assed code because i needed something fast. If you'd like a better code let me know, i can update it

Enjoy :)

This is just for education purposes only.

This isn't the most legal script so make sure you have permission and proper permissions.

It's like there's no DRM.
