The Buyer's Guide to AI Usage Control

Today's "AI everywhere" reality is woven into everyday workflows across the enterprise, embedded in SaaS platforms, browsers, copilots, extensions, and a rapidly expanding universe of shadow tools that appear faster than security teams can track. Yet most organizations still rely on legacy controls that operate far away from where AI interactions actually occur. The result is a widening

AI is spreading faster than policy updates.. if controls don't sit where people actually use AI, gaps are pretty much guaranteed

shakur123 - February 22, 2026, 6:38 pm

Exactly. Perimeter controls don't work when AI lives in the browser and extensions.

Security has to move to the interaction layer — session-level controls, prompt inspection, and identity-aware DLP — or data just walks out through a prompt box.
