AISURU/Kimwolf Botnet Launches Record-Setting 31.4 Tbps DDoS Attack

The distributed denial-of-service (DDoS) botnet known as AISURU/Kimwolf has been attributed to a record-setting attack that peaked at 31.4 Terabits per second (Tbps) and lasted only 35 seconds.

Cloudflare, which automatically detected and mitigated the activity, said it's part of a growing number of hyper-volumetric HTTP DDoS attacks mounted by the botnet in the fourth quarter of 2025. The

31 tbps is wild.. even if it lasted only 35 seconds, that kind of power is scary. Good thing cloudflare caught it fast.

IRLCash - February 22, 2026, 4:05 pm

They got enough power to take down small countries don't they?

Stratos - September 14, 2026, 7:31 pm

This is growing fast, that's scary.

CyberXero - September 15, 2026, 12:05 am

Just recently turned my interest towards botnets, I enjoy write-ups about this niche!

m1000 - September 15, 2026, 4:46 pm

What would be a more typical attack strength? Just want something to compare it to because obviously 31.4 Tbps is a lot!

XtremeDiscount - September 15, 2026, 7:47 pm

How the fuck do you get so many computers infected without being detected lol. Wow crazy stuff
