Thread: [Wi-Fi Hacking 101: Basics](#)

daemoncibsec - February 15, 2026, 11:56 pm

Hello guys! A pleasure to meet you. I've created a post talking about Wi-Fi Hacking, how handshakes work and how are tools like Aircrack-ng able to crack Wi-Fi passwords. Of course, this is nothing new, just something I like to post only for anyone that needs it or finds it interesting. If you like this content, you can definitely subscribe to my Instagram account or even my Github Repo, and if you need something, just send me an email or ask through this post. Hope you guys find this helpful. See you!

Great explanation of the whole process but uses very outdated tools that are ineffective and inefficient.

Simpler, faster, and more advanced method<https://deepwiki.com/ZerBea/hcxdumptool/1-overview>

you can drop the macchanger step when deauthenticating a client.
aireplay changes your mac to the string following -a, deauths from any mac address other than the AP hosting that client will be ignored.

afridkh876uu - February 22, 2026, 12:45 am

Sir how to create Bluthouth jamer

IRLCash - February 22, 2026, 1:32 pm

Great post very helpful for beginners! I also suggest looking into using WiFite, easily accessible in Kali linux & makes things quick.

That's a really great tool as well! I decided to use aircrack-ng because I didn't know hxdump existed, and to help people learn about EAPOL, though Wifite is really great as well!

Look into AngryOxide, an absolute goat right now for WiFi testing. Amazing tool.
