Thread: [Who can teach me how to achieve the highest possible level of privacy](#)

Drayzen705 - February 16, 2026, 11:33 am

I'm looking for advanced, in-depth knowledge — not basic or beginner advice like using a VPN, private browsing mode, or simple security tips. I want to understand serious operational security (OPSEC), advanced anonymity techniques, digital footprint minimization, secure communications, and privacy-focused system setups.

Ideally, I'm interested in learning from experienced professionals, researchers, or structured courses that go beyond surface-level information and cover real-world strategies and threat modeling.

Thank you.

Sadly that member has had his account closed. There are others however that can help! Check out the hacking tutorials section for a place to get started. Great resources there.

Want complete privacy? Do not use the internet!

Just kidding! Well there are tons of ways to keep your tracks off the grid online but it depends on your use case or goal why you need that level of privacy. It also depends on which country you are

from. VPN is sufficient if you are not doing anything radical and you keep your logs clear on a daily basis. If you plan to do something beyond that, I suggest do not use your internet at home, always connect to public wifi and study how proxychains work. I think that is a start.

[Drayzen705](#)

I can most likely help you with this.

Send me a PM or Convo DM when you're ready to begin. My Telegram is linked on my profile if you prefer that.

If you still need help with OPSEC, do let me know. I hope you know basic linux to operate tails.

Gaca - February 22, 2026, 1:43 pm

I can guide you on how to setup advance OpSec for your PC whether you're using Windows, Mac, or Linux
