Thread: [P2P botnet completed](#)

socks4 - February 21, 2026, 2:01 pm

I spent a few weeks working on this, safe to say it is likely done

It's a native p2p botnet, works from anywhere and behind NAT's. peers collect basic system info and communicate with each other, so any commands sent can be propagated properly. output size is huge (70mb obfuscated) but runtime is basically flawless:

Thoughts? It won't be sold on here most likely but I wanted peoples opinions

jack02 - July 19, 2026, 9:33 am

I don't understand, but I want it.

I need a botnet attack, can you DM me your contact info?

sounds like you need ddos services, which I do not offer

cscscs666 - July 28, 2026, 8:51 am

I need a website attack
