Thread: [Could you please recommend me some premium crypters for BitRAT](#)

ShxtBrix - February 24, 2026, 10:40 am

So short version is I'm looking around at the crypter market, it doesn't have to be anything magical, but I'm not looking to pay a few hundred bucks a month for some shitty crypter someone vibe coded.

I'm looking for something in the \$20-60/month range. I was wondering if any of you had recommendations on something suitable for this, the most common things I expect to encounter are Norton, Kaspersky, and other mass produced AV systems used across organizations.

I'm fairly certain the RAT I use is native, it's a version of BitRAT which uses tor, and that's why I use it.

?BADMAN? - February 26, 2026, 12:41 am

Most crypters will get detected and removed by AV.
You need to load a rootkit after crypter succeeds to run.
After that it will stay on computer.

If you want something advanced you pay the price, otherwise go with "shitty crypters".

ShxtBrix - February 26, 2026, 2:29 am

So this is just a ploy to sell me something? I am looking for a crypter but thanks for your concern. I won't be needing your services.

ithmz - February 26, 2026, 4:28 am

Well, hope you find a loader/crypter.. good luck.

ShxtBrix - February 26, 2026, 8:52 am

(Feb 26, 2026 05:28 AM)ithmz Wrote: [\[CITE\]](#) Well, hope you find a loader/crypter.. good luck.
I've already procured a supplier for a more than reasonable price

and in the process I've had nearly 5 people try to dm me and sell me overpriced BS, be careful about what people tell you.

WolfLtd - February 26, 2026, 9:47 pm

wasn't BitRat found to be a backdoor like awhile ago that's why it stopped selling on this forum. As least that's what I thought happened

ShxtBrix - February 26, 2026, 10:22 pm

I appreciate your concern but I have enough common sense to use a VM.

MadScientist - February 26, 2026, 10:32 pm

But... youre still exposing your VM and every computer you administrate wild people normalize using backdoored tools just in a VM- at least to me

ShxtBrix - February 26, 2026, 10:43 pm

I'm not going to discuss it at arms length my decisions and their consequences are mine to bare. I'm looking for actual constructive conversation on the topic at hand, but thank you.

MadScientist - February 26, 2026, 10:52 pm

Okay, for others - https://github.com/miketestz/BitRAT_is_Thief.

Dont use this tool

fatfbiagent - February 26, 2026, 11:08 pm

So let me get it straight, you want to pay 20\$-60\$ a MONTH for a crypter that is supposed to DEAL with multi billion dollar industry antiviruses on the daily?

Hahahahahahaha

With your price range, go work a proper job. Unless you are willing to pay 40-60\$ a CRYPT every few days, you have nothing to do in malware. You are wasting your time.

ShxtBrix - February 26, 2026, 11:11 pm

Can you rage bait any harder? You're pretty bad at this, and given the reputation you seem to have garnered your social engineering skills could use some polishing. Good luck to you.

What are you trying to achieve with a 20-60\$ crypter? There were thousands of those in the last years on HF, know why they are none left? Guess. Maybe.... Just maybe... because it is not possible in 2026 for crypt owner to work with such PRICE RANGES/ IT became so hard so they all quit and they are not able to provide the service any longer (At-least honest ones, and those that are not scams)

If you had any brain cells, you would understand that a minute a file lands on disk, it gets sent to AV labs, sharing a crypter with "your" budget will never work on real operation, defender will auto flag ur stub within 1 hour. Good luck waiting 48 hours for refud from crypter owner just because some kid

used the stub 1 hour before you, LMFAO.

There is a reason why "real" cyber criminals, pay up to 20k/month for proper crypter. Yet kids on HF limit their budget to 20-40\$ a MONTH. JESUS

What are you trying to hack? roblox?

Even with that scope you are bound to fail.

You think we are in 2006?

AI Engines are stronger then ever, "crypt" flag can occur as fast as 10 minutes from first being seen by CHROME!

"But ok" reputation on HF means all, if you only knew who you were talking to...

That is fine, you will learn the lesson quite quick and most likely quit in 1-2 months. Just like 99% of people.

You dont get to have a valid opinion you're obviously just here to derail the conversation, this isnt what was even asked. Reported your post for post etiquette too. You obviously don't belong here have you considered logging out and not coming back?

Now if you want to have a serious conversation about crypters that are compatible with BitRAT we can do that. Otherwise you're just being a waste of space.

fatfbiagent - February 27, 2026, 1:06 am

You are literary a skid, a poor skid. You are using a backdoor-ed software, and want to buy a crypter for a price of 5 energy drinks.

I literary told you 5 reasons why you will fail and become a failure. You chose to ignore them. Truth is painful.

Nobody cares what you think, I am here to open the mind of others who think they can become successful with malware in 2026 with 20-60\$ budget. Forget it.

If you think it is so easy to "vibe code" a crypter for for a few hundred dollars a month, why don't you do it? Your entire thinking is illogical in so many levels.

You claim vibe coded crypt is "bad", but you want to pay less. LOL

You're on a forum that's heavily monitored by law enforcement, you have the survival instincts of a house fly. Again you dont get to have a valid opinion.

Survival instincts? Because of what crypts? Crypting has been a thing for well over 20 years, in the entire 20 years there were maybe 5 arrests related to crypts and they were all not directly related.

I am over 10 years in this scene. From Darkcomet days, blackshades. Names you probably never heard before. Nothing I said here is illegal not do I endorse doing it on HF. I never sold nor planning to sell shit here.

Maybe I am the one who is doing things right...

I saw thousands of crypters come and go, 0 survived... but okay kiddo.. you do you, I do me. Fyi: I can crypt a file in less then 1 minute and pass all AV's with the system I have in place.

Broke boy.

Maybe... listen to the magic man, me. I know 100% more then your average 1337 crypter seller here on HF.

ShxtBrix - February 27, 2026, 2:20 pm

You've already failed to take notice, good thing you use a VPN nignog. Given the fact its Datacamp Limited you're likely using protonvpn a FREE vpn and despite all these "big claims" you didnt even notice the embedded IP logger. So much for ten years of experience, yet you call me a skid.

You kept running your mouth and fell to the first move you can't even use tactics. My bet is you're fucking broke, prove me wrong go upgrade to HF l33t and neg me. Show us you got some coin if you can afford that 20k a month on crypters you oh so gleefully boasted about its a drop in the bucket for a "Big hackerman" like you LOL. A decades worth of survival isnt a decades worth of experience. You came at me with all this elitist bullshit and failed to spot such a basic attempt even if a VPN saved your ass like a condom. If it didnt I was going to ISP dox you.

I won't bother replying again, you've been outplayed. You lose. Even if "Nothing happened" you failed on merit, you didnt spot the obvious attack, you quoted it which means you should have spotted the text you clown.

You embedded an IP logger in a post and you think you some kind of 1337 haxor? Is this 2006? Who cares about ISP dox.

Pro tip: Datacamp is a provider for every single no log VPN today, be it, mullvad, your l33t proton, or whatever, oh and thousands of proxy dedi/VPS server resellers.

I don't buy the service, I provide it. I average alot more then 20k/month. That is the diff between us, you are a talker, I am a doer. Broke boy.

rtua - February 28, 2026, 1:09 pm

Coming here to add that while Fatfbiagent is rude, he is right lmao. ShxtBrix, you should listen to him. He is not just talking shit.

Ah, lets cut the crap. U two stop measuring which one dick is bigger and better help each.

Here u go <https://github.com/xM0kht4r/AV-EDR-Killer>

Free signed driver vuln with ability to terminate all antivirus for free for ever while app runs. Works on all windows by this day.

Like u guys mentioned 1 billion companies bla bla bla but reality is they get fukt even for free these days as u see no need even 50\$
