Weekly Recap: Outlook Add-Ins Hijack, 0-Day Patches, Wormable Botnet & AI Malware

This week's recap shows how small gaps are turning into big entry points. Not always through new exploits, often through tools, add-ons, cloud setups, or workflows that people already trust and rarely question.

Another signal: attackers are mixing old and new methods. Legacy botnet tactics, modern cloud abuse, AI assistance, and supply-chain exposure are being used side by side, whichever path

It's honestly wild how stuff that we trust on an every day basis, can end up being the weak spot. Makes you rethink basic setups.

shakur123 - February 25, 2026, 1:10 pm

Every week it's the same lesson: it's not always the flashy 0-day — it's the "harmless" add-in, the forgotten cloud setting, or the tool everyone blindly trusts.
