Thread: [Omega Sapiens Dedicated Coding Journey Thread](#)

Omega Sapien - February 25, 2026, 8:20 pm

Hello friends, instead of making a lot of sporadic low quality posts about my modest efforts to learn to code I decided to make a dedicated thread for myself to update as I make new attempts and try new ways to learn. I will be focusing heavily on learning to code through coding OSINT tools. I don't know if this is something that has ever been tried before but if it works out maybe I will leave behind lots of stuff to help others learn too!

Some of you maybe seen my earlier post about my Shadow Trace tool that I used AI to help me code. I have doubled down this time and switched to Claude AI and it coded me a full blown tutorial website. I have attached a screenshot for those leary of links. I also have hosted the page on a free hosting service and you can access it as well. I will go through all the projects in the tutorial and code them all. Find a free way to host them as well and post them in replies to this post. As always I welcome advice, criticism, suggestions, input and feedback of any sort and will take it all into consideration. I look forward to growing as a coder and hearing from you all!

The link to the tutorial that Claude created for me is
https://omegasapien.ct.ws/python_osint_tutorial.html

Defenzo - February 26, 2026, 9:45 am

You have done great work man i like the design and the idea it's dedicated only to OSINT , but i think you should add more detailed explanation in Python Basics section.

keep it up

keep it up

Hey thanks for the feedback! I agree. I felt the same way. I will attempt to do that tonight. I don't know if you saw or not but it is AI generated. I will try to get Claude to make a version 2 tonight and then update the page. If I can successfully do this I will post it on this thread. I'm glad you like this starting point though!

[OSINT PYTHON TUTORIAL VERSION 2 UPGRADED](#)

Hey everyone, I did a quick update to the tutorial with Claude. The original version is still available as well I am going to make every version have its own link.

Here's a screenshot! This one has a little bit more information. It's probably best to do it like this updating it incrementally so that Claude does not get overwhelmed.

What is the prompt you used to get this type of design for your website?

I think a lot of it is that the AI just knows some of my likes and dislikes but this is the prompt I used for the initial tutorial. lol

PHP Code

<?php

I want to learn how to program in Python I am a total noob and

I want to make it interesting by learning by creating OSINT apps. Can you create a tutorial for me that teaches me to code by guiding me through writing a beginner level OSINT app and making it hostile on render

That was a typo and everything it was supposed to say "hostable" not hostile.

Also here is an expanded 3rd version of the tutorial with a lot more information.

I have not made anymore progress on my coding yet. I have however started a new project. I am gathering all the working links that people have shared in the coders lounge to help people and making a directory for people to use when researching. So far I have sorted through 20 pages of the coders lounge and have around 85 working links.[Codors Lounge Link Directory](#) I have included a screenshot. I am not using this site for any purposes other than projects I post on HF. It's not like a personal website or anything. I just am making stuff and posting it there to share on the forum!
