Thread: [HF Radar | Telegram Notifications for HackForums \[Open-Source\]](#)

Au Jus Demon - February 26, 2026, 10:14 pm

HF RADAR

Telegram Notifications for Your HackForums Account

[? OPEN THE BOT: @HFRadar_Bot](#)

Official HackForums API integration • Runs 24/7 • Instant alerts

? What Is HF Radar?

HF Radar is a Telegram bot that monitors your HackForums account and sends instant notifications directly to Telegram.

No refreshing pages. No checking the forum constantly. No missed contracts, messages, or Bytes.

Connect once using official HackForums OAuth, and HF Radar runs in the background 24/7.

The moment something happens on your account, you'll know.

? What It Alerts You On

Every alert type can be turned on or off anytime from the bot menu.

? Account Activity

? New private messages (unread status only, content is never accessed)

? Bytes received (amount, sender, and reason)

? Popularity and reputation changes

? Marketplace & Trading

? New contracts received

? Contract status changes (disputed, cancelled)

? New B-ratings received

? Disputes opened involving your account

? Thread Activity

? Replies to threads you created or posted in

? Mentions and quotes anywhere on the forum

? Forum Watching

? Watch up to 3 forums

? Get notified when a new thread is posted in any of them

? Buddy Tracking

? Track up to 5 HackForums users

? Get notified when they post or create threads

? Setup & Security

Setup takes less than 30 seconds.

1. Open the bot
https://t.me/HFRadar_Bot
2. Click Connect HackForums
3. Authorize via official OAuth

That's it. Notifications begin immediately.

? Security

HF Radar never sees your HackForums password.

? No private message content is ever read or stored, only metadata like unread count and timestamps

? You can revoke access from your HackForums account at any time, instantly cutting off all API access

? The bot only requests read permissions, nothing more

HF Radar is currently in public beta. Fully functional and actively maintained.

? Open Source

HF Radar is fully open source. The complete bot code is public on GitHub so you can see exactly what runs on your account.

<https://github.com/AuJusDemon/HF-Radar>

Every API call the bot makes is documented in detectors.py and the PRIVACY.md file in the repo. No surprises, no hidden behavior.

You can also self-host your own instance if you'd prefer to run it yourself there are setup instructions in the README.

Ready to use it?

Connect once. Alerts start immediately.

Thanks, I have a few more coming as well. I mainly got the idea from [7](#). The only real limitation so far is the API hourly limit and finding forum-wide mentions or quotes.

Jamika - April 27, 2026, 10:39 am

Not working for me ?

Pressing start , nothing happens

It's running now. Had a small server hiccup.

casper - *April 27, 2026, 12:43 pm*

Definitely trying that , Nice work bud !
