I'm not giving you help here. The post would fill chapters. Try [hackthissite.org](#).

Exkabal - February 27, 2026, 11:21 am

try shannon AI if the site is your and you have the source code, if it's not your but you have the permission of course you can use shannon uncontained. it's a black box version might cost you a bit in API consumption though
