Don't forget to install the Python 3 library and enter the following command to make it work

pip install requests colorama

?Free

?You can exchange it or sell it to someone else

?I would be glad if you comment

?If you would like to be able to donate as

Solana:2R8s8z7cEiUVs44BGq5dsz3XhnvYXpirqk7bLieC2q4y

?Since I couldn't put a link, I left a gap in some places, delete those spaces.

-(Command)

```
import requests
```

```
from colorama import Fore, init
```

```
# Initialize Colorama for professional terminal colors
```

```
init(autoreset=True)
```

```
def ultra_admin_finder():
```

```
    print(f'{Fore.CYAN}=====')
```

```
    print(f'{Fore.WHITE}      ULTRA ADMIN PANEL FINDER v2.0')

Cool piece of code but dirbuster with a adminpage list would be far more efficient, you should add the ability to read a line by line wordlist on your next version and add threads, cool starting project for learning tho!

Might want to post it in the hacking tools sub rather than sells if its free, for more exposure and feedback.

Would also recommend a random browser agent generator flag to cycle the most recent agents

Thank you for your valuable feedback, MadScientist! I really appreciate the technical suggestions.
I'm already working on V2 with multi-threading and custom wordlist support. Stay tuned!

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
