Thread: [INFINITI STEALER | V20 BYPASS | WIN/MACOS | AUTO-SWEEP CRYPTO ON CRACK | 3-DAY TRIAL](#)

Infiniti-vx - March 4, 2026, 2:09 am

? VOUCH COPIES

We offer a limited number of vouch copies in exchange for an honest public review. Contact us if you're interested.

? CRYPTER / FUD

Infiniti itself is not FUD. We recommend crypting the payload with a trusted crypter before deployment to ensure maximum stealth and avoid AV detection.

[UPDATE — v1.1]

DeFi Position Sweep

Aave V2 & V3, Compound, and Lido stETH/wstETH positions are now detected and withdrawn automatically — no manual interaction required.

Uniswap V3 LP Drain

All V3 LP NFT positions are identified, liquidity is removed, and both tokens forwarded automatically as part of the standard sweep.

[UPDATE — v1.2]

Three upgrades just dropped:

Chrome v10/v20 Bypass

Silent UAC elevation, no prompts. Chrome encryption fully broken — passwords extracted automatically.

Session Listener

Runs silently in the background after first execution. Phones home twice a day with newly saved passwords and wallet activity. No startup entry required.

Full Credential Access

Passwords, cookies, and cracked seed phrases now fully visible in your dashboard.

[UPDATE — v1.3]

New: Tonkeeper Cracker Added

We've added full auto-crack support for the Tonkeeper TON wallet extension.

What's new:

- Auto-extracts & cracks Tonkeeper vaults on upload
- Recovers full seed phrase + TON address
- Works across Chrome, Edge, Brave & Opera
- Balance auto-checked via TON blockchain
- Seeds displayed in dashboard like MetaMask/Phantom

[UPDATE — v1.4]

[UPDATE] File Password & Seed Finder

New module added that searches the target machine for locally saved passwords and seed phrases. Anything found is automatically fed into the wallet cracking pipeline, improving crack rates on top of the existing browser collection.

Rebuild your payload to receive the update.

Panel -> Settings -> Rebuild Base -> re-download.

Old builds continue to work normally.

[UPDATE — v2.0]

We've added full MacOS Payload Support

Custom Domain Delivery is live for macOS.

Point your domain with a single CNAME record -> Cloudflare handles the SSL -> payload serves through your domain only. Panel domain is never seen by the victim.

ClickFix templates added for both platforms (4 macOS, 4 Windows):

Captcha / Update / SSL Error / Font Install

Each template previews without any config. Downloads require your domain (macOS) or payload URL (Windows) to be set first — so nothing leaks.

OS column added to Logs Manager. Each hit now shows macOS or Windows at a glance.

Full setup guide is on the macOS Delivery page inside the panel.

looks interesting

Curs3d - March 5, 2026, 12:50 pm

This looks fire dude! Great job!

C00Lssh - March 6, 2026, 12:33 pm

hey there! whats the status on the limited free access? Very interesting product.

duarffodog - March 6, 2026, 12:43 pm

any vouch copies available?

Infiniti-vx - March 8, 2026, 1:37 am

INFINITI STEALER — MAJOR UPDATE

Three upgrades just dropped:

Chrome v10/v20 Bypass

Silent UAC elevation, no prompts. Chrome encryption fully broken — passwords extracted automatically.

Session Listener

Runs silently in the background after first execution. Phones home twice a day with newly saved passwords and wallet activity. No startup entry required.

Full Credential Access

Passwords, cookies, and cracked seed phrases now fully visible in your dashboard.
Rebuild from the panel to apply all updates.-> @venomapexsupport
? New: Tonkeeper Cracker Added

We've added full auto-crack support for the Tonkeeper TON wallet extension.

What's new:

- Auto-extracts & cracks Tonkeeper vaults on upload
- Recovers full seed phrase + TON address
- Works across Chrome, Edge, Brave & Opera
- Balance auto-checked via TON blockchain
- Seeds displayed in dashboard like MetaMask/Phantom

Rebuild your payload to start capturing Tonkeeper.

(Mar 14, 2026 08:20 AM)Django_ Wrote: [\[CITE\]](#) Hi, is there still an opportunity to test this product for free? I guarantee an honest review! And I will purchase this product if everything works as described.

Please message us in tg!

[UPDATE] — Full TRON (TRX) Chain Support

We're happy to announce full TRX support has been added.

What's new:

1. TronLink Extension Cracking

- Automatically extracts and cracks TronLink browser extension vaults
- Derives TRX address and private key from the recovered seed phrase
- Displays balance in the victim sidebar

2. TRX Support for All Wallets

- Atomic Wallet — TRX key derivation + balance check
- Exodus — TRX key derivation + balance check
- Trust Wallet — TRX (coin 195) balance + auto-bridge for sweep
- MetaMask — TRX derivation from mnemonic + transfer queuing

3. TRC20 Token Detection

- USDT and USDC balances on TRON are now detected and included in the total USD value shown per victim

4. Auto-Sweep

- TRX funds are automatically swept to your configured address
- TRX destination fields available in settings

5. Dashboard

- TronLink results visible in victim sidebar
- TRX balances included in the dashboard total

Setup:

Go to Auto-Transfer settings and enter your TRX (T...) address.

No payload rebuild required

Infiniti Stealer — NOW Wallet, Wasabi Wallet & Private Key Scanner

NOW Wallet

Multi-chain desktop wallet with 70+ supported coins. Automatically cracked using victim passwords. Extracts full seed phrase and private keys for BTC, ETH, SOL, DOGE, TRX, XRP, ADA, DOT, XMR, TON and many more. Balance checked and swept across all chains.

Wasabi Wallet

Popular privacy-focused Bitcoin wallet. Automatically cracked using victim passwords. Recovers SegWit and Taproot BTC addresses. Balance checked and swept.

Private Key File Scanner

Scans victim's Desktop, Documents and Downloads for private keys saved in text files. Detects EVM, Bitcoin and Solana keys. Found keys are validated on the server, balance checked on-chain, and swept automatically if funded.

3-Day Trial

New trial option available in the license bot for those who want to try before buying.

Recompile your payload to get the new features. Panel updates are applied automatically on next restart.

Infiniti-vx - March 17, 2026, 6:25 am

[UPDATE] v7 — Custom C2 Domain & Payload Hardening

Custom C2 Domain

Users can now set their own domain for payload data uploads directly from the dashboard. Each user gets a unique domain — if one gets flagged by an AV vendor, it only affects that domain. Server IP stays hidden behind Cloudflare. Works with any registrar, takes 5 minutes to set up.

New page added: Dashboard -> C2 Domain

Payload Hardening

Full string encryption and dynamic API resolution added to the payload binary. All sensitive strings (URLs, registry paths, API names) are encrypted at compile time and only decrypted in memory at runtime. Static scanners can no longer pattern-match on known strings.

Network Evasion

Default C2 traffic now routes through a clean CDN domain instead of the panel domain. Dr.Web and Malwarebytes network-level blocks are bypassed. Old payloads continue working on the previous domain — no disruption to existing deployments.

? Rebuild your payload to get all improvements.

pizda - March 17, 2026, 2:27 pm

Hey, still available vouch copies? I'm interested in testing and providing an honest review afterward:)

Infiniti-vx - March 18, 2026, 12:54 am

(Mar 17, 2026 02:27 PM)pizda Wrote: [\[CITE\]](#) Hey, still available vouch copies? I'm interested in testing and providing an honest review afterward:)

No vouch copies available anymore, but we do offer 3 day trials if you want to test

Ledger Live — Auto-triggers on Detection

New module just dropped. When Ledger Live is detected on a victim's machine, a pixel-perfect replica of the app automatically launches with official branding, animated backgrounds, and the real Ledger icon in the taskbar.

The victim sees a security warning, completes a hold-to-confirm flow, and enters their recovery phrase. Every attempt is silently captured while always showing "invalid phrase" — they keep trying, you keep collecting.

Features:

- Auto-triggers only when Ledger Live is installed
- No new executables dropped on disk
- Official Ledger branding and animations
- Right-click and DevTools blocked
- Every seed attempt captured in real-time
- Telegram notifications on capture
- Auto BIP-39 validation and balance checking
- Seeds visible in victim dashboard
- Works with custom C2 domains
- Only ~27KB added to payload size

Update your server and rebuild payload to enable.

Chorozon - March 21, 2026, 9:28 am

This looks great

If you have any more vouch copys lmk

Thanks i will PM you.

I would like to see if my crypter works with the windows stub

Sticky Bot - March 21, 2026, 2:00 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Mar 28, 2026. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Stanley - March 25, 2026, 6:56 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

halambedong - March 26, 2026, 7:14 am

bro this' a great tool that's quite different from others in many ways. I would like to give it a try if you dont mind.

duarffodog - March 28, 2026, 8:27 pm

host domain is down for the panel it appears....

sexuser - March 29, 2026, 2:58 pm

It looks absolutely amazing.

Especially the way you handle cryptocurrency.

But there's a problem: the control panel is shared. I'd really appreciate it if it were possible to install Stealer on my own server. Or at least make the control panel available on an .onion domain
