Thread: [Pulsar RAT v2.4.3 + Plugins - someone has it?](#)

aficionadohxc - March 12, 2026, 7:35 pm

Hello friends, greetings to all. Does anyone have this rat?

Hello friends, greetings to all. Does anyone have this rat?

Why would you want an old version? It's possible that KDot has an archive, but otherwise there's little chance, especially with the old repos gone.

Hello, good evening. Is it an old version? I'm mainly looking for the plugins.
Can someone please help me?

Those plugins look like shite. Click about on the rat and click telegram channel. That's probably where you're gonna find them. Or they're custom plugins and the creator didn't share more than a screenshot.

If the Pulsar Plugins repo doesn't have what you want, I think that there was a Telegram bot where you could get plugins in exchange for a donation. I don't see how they'll do you any good by themselves unless you want to study the source code.

Hello, greetings. I'm mainly looking for information on using HVNC on Windows 11.

Can someone please help me?

timmi888 - March 14, 2026, 8:07 pm

pulsar isnt even a good program anyways too many functions dont work properly bro not worth your time

the plugins? , they are no longer of any use, it's quicker to rewrite the code with Claudecode or Cursor, it will definitely do a better job than that Rat I assure you.
