Thread: [silent miner Windows 10/11](#)

botnetloader - March 19, 2026, 9:18 am

I update the Injection method from UnamSanctam

Planned Features

open source xmrigr

anti-vm

clipper

gitlab.com/silentcryptominer1/SilentCryptoMiner

Hackers - March 19, 2026, 9:20 am

Interesting, UnamSanctam was pretty popular a few years ago if I remember correctly.

I am not accusing you, but HF users should be aware that UnamSanctam forks have been used to hack devs for years. It's a common one that has been used for backdoors, usually in compiling/build step.

Again, not accusing you of anything... I'm glad you came here and shared this resource for your first post

I bet it is. As I said, a lot of times people used compile/build steps to hack developers using a vuln codebase instead of released premade malware. The hashes could be totally fine.

It's your first post on here. Surely you appreciate my concern to keep us all safe.

Hello, I am using your miner and I have over 400 workers. However, when the user opens taskmgr.exe, the miner doesn't restart even after they close it. Why is that? Lastly, when are you planning to add a clipper? Thank you.
