Apple Issues Security Updates for Older iOS Devices Targeted by Coruna WebKit Exploit

Apple on Wednesday backported fixes for a security flaw in iOS, iPadOS, and macOS Sonoma to older versions after it was found to be used as part of the Coruna exploit kit.

The vulnerability, tracked as CVE-2023-43010, relates to an unspecified vulnerability in WebKit that could result in memory corruption when processing maliciously crafted web content. The iPhone maker said the issue was
