AI is Everywhere, But CISOs are Still Securing It with Yesterday's Skills and Tools,

A majority of security leaders are struggling to defend AI systems with tools and skills that are not fit for the challenge, according to the AI and Adversarial Testing Benchmark Report 2026 from Pentera.

The report, based on a survey of 300 US CISOs and senior security leaders, examines how organizations are securing AI infrastructure and highlights critical gaps tied to skills shortages and

I think that a lot of the next generation will be less competent when it comes to tech to deal with this kind of stuff. It doesn't make it any better that every other week it seems like Anthropic or OpenAI are dropping a new, more capable model and it's oh shit now it can do this, that, etc. When you look at the data the AI is trained on, you're kind of fighting a losing battle I feel like, because the current models likely are trained/know much more than most people are going to, especially on very tiny subsets of tech.
