Thread: [Anthropic \(Claude Code\) Backend Leak](#)

Omniscient - March 31, 2026, 9:03 am

It's not the AI source code but it is the interface.

Crazy leak, what can you do with this leak?

<https://github.com/nirholas/claude-code>

Omniscient - March 31, 2026, 9:20 am

This is a repo of the code in Python which apparently can't be taken down by DMCA since it's not the original Typescript Anthropic code.

Interesting read.

I wonder how much shocking info would be uncovered about openAI or Gemini

jackreacher - March 31, 2026, 1:11 pm

That's quite concerning. I believe the DevOps team should be held accountable for this oversight at that level, important issues shouldn't be missed.

Omniscient - March 31, 2026, 1:20 pm

I really think the future of AI is going to be fully open source. I can't see a world where all this code is just kept secret forever. AI is so smart and they want us to code with it then why wouldn't everyone vibe code any paid features into a free version?

I'm sure we'll pay services for their power and latest models but their backends are likely going to be run on open source code.

The original leaked code can still be downloaded using Internet Archive. There are 2 snapshots available for 31st march :D.

Ram - April 1, 2026, 6:04 am

Anyone still got the leak to download? PM me or post here link pls

bohne1337 - April 1, 2026, 6:10 am

What I dont understand is what this means now?

Whats the use case for anyone of you / us and why is it big? I mean sure its nice to see how they work, but what am I even looking at? an IDE?

Omniscient - April 1, 2026, 7:29 am

Use case is building your own service.

bohne1337 - April 1, 2026, 8:11 am

(Apr 1, 2026 07:29 AM)Omniscient Wrote: [\[CITE\]](#) Use case is building your own service. but for that I would need a ton of hardware, ton of (v)ram and stuff like that, correct?

so its neat for any potential competition (especially outside of US copyright laws), but not really helpful for me as an API Customer?

We also learned quite a bit about the billing so for normal API user -> With small adjustments you could possibly make your invoice little smaller.

cuatrero - April 1, 2026, 5:24 pm

quien lo tiene mande mensaje privado o deje el link no github bloqueado

Lyralei - April 1, 2026, 9:09 pm

It was interesting reading the prompts though I'm pretty sure most people know about them already since they can just check the sent request. The code's the game changer though. I'm pretty sure a lot of open source IDEs will improve 'suddenly.'

ebod-githzari - April 3, 2026, 4:48 am

But how is this sustainable? Why pay for something that you can clone and run in a few days?

I believe the "secret sauce" ingredient will always be a big factor in success.

TheFireFlie - April 5, 2026, 2:38 pm

All from a simple mistake too

NoSuchAgency - April 5, 2026, 3:57 pm

I'm using it to help inspire a ground up terminal for me to use. I needed something I can customize for my own workflows. I've already seen several copies built and booted from the leak, you do have to reverse engineer the missing local packages, but supposedly that is relatively easy.

CrazyMinecraftOMG - April 7, 2026, 11:38 am

Thank a big leak. Shame on antrophic

Napster3301 - April 28, 2026, 6:25 am

Is there some other link, this doesnt work anymore.

andrew11 - August 17, 2026, 8:32 am

This is quite interesting.
