Thread: [SXVM - A leaked EDR introduction](#)

Biggy_Asian - April 3, 2026, 10:26 am

This was made by a dev who was half lazy half not, so the code is not amazing, old and should not be used in production however is supposed to serve as a base to get users introduced to edr/edr evasion. It was posted on github, shared around telegram and other shit.

Theres a pdf and a c# project you can compile or read the source of the pdf has a list of EDR dlls used by some common anti virus programs, the only reason ive kept it around is for the few edr dll names that are inside.

Wonky line ftw! who needs formatting am i right?

Avast	aswhook.dll, aswAMSI.dll
Bitdefender	atcuf64.dll, bdhkm64.dll
F-Secure	fsamsi64.dll, fshook64.dll, fs_ccf_ipc_64.dll
Sophos	hmpalert.dll, SophosAmsiProvider.dll
ESET	eamsi.dll
Kaspersky	com_antivirus.dll
Norton	symamsi.dll
Malwarebytes	mbae64.dll
