I have spoken with the author of the stealer, and he offers the product in executable, and for the price of 240 dollars..... It is not convincing, I should share... I hope the Stealer is prodigious.

You'll let us know.

Best regards

@cellik, I saw that you already got a voucher copy but yet to give it a review. Could you proceed please ?

I saw that you already got a vouch copy but yet to give it a review after testing. Could you give a honest review before others purchase it ?
