Thread: [Is flipper zero beginner friendly?](#)

albinoturtlegod - April 11, 2026, 1:34 am

Curious if a flipper zero is like a easy to learn hard to master thing

If you expect to unbox it and start hacking any SubGHZ signal, open any gate using wireless card or things like this without any knowledge about that and without looking any tutorial you will be sad!!! This is not hard to use and master but you first need to learn some things. Learning the device and signal range, kno of to identify the wanted device etc. Watching a good tuto and understand how it work and pratice it is the key. This is not a automatic hacking tool like many people show but there is a lot of good tuto around so if you want to learn and you understand fast you will like otherwise you will mess around closing and opening IR device xD.

DramaKing - April 11, 2026, 3:24 am

More like an easy-to-learn tool that you quickly reach the limits of.
