Magic Button

A project by NetScan team

WordPress Credential Checker & Code Injection Tool

wpmagic.net

What is WP Magic Button?

WP Magic Button is a professional platform for WordPress credential checking and code injection. It accepts login lists (domain + user + password), checks them in parallel against live sites, and for successful logins automatically injects your PHP/JS script through all available methods.
wpmagic.net

Key Features

Credential Checking — parallel WordPress login verification across multiple threads

Code Injection — writes script via Theme Editor, File Manager, Plugin Editor or Plugin Upload

Campaign System — organize checks into named campaigns with saved results and resume capability

Proxy Support — proxy lists for IP rotation during checking

4 Injection Methods (in priority order)

After successful login, the system tries methods in order and stops at first success:

#MethodHow it worksLabel

1Theme EditorOpens theme-editor.php, finds active theme's functions.php and appends the script
TE_INJECTED

2File ManagerActivates file manager plugin and writes script directly to the filesystem
FM_INJECTED

3Plugin EditorOpens plugin-editor.php and injects into the main PHP file of a pluginPE_INJECTED

4Plugin UploadUploads ZIP via plugin-install.php and activates it. Requires ZIP upload in settings
PU_INJECTED

Methods 3 and 4 are only attempted if methods 1 and 2 fail. This prevents double injection on a single site.

Result Categories

Good — login successful, credentials valid, WordPress panel accessible

Injected — login successful and script written to the site via one of 4 methods

NoPlugin — login successful, but no injection method worked due to editor restrictions

Bad — login failed: invalid credentials, site unreachable, or timeout

"Clone missed" feature — if some Good credentials were not injected, creates a new campaign with only the uninjected credentials for retry.

Supported Credential Formats

The parser automatically detects the delimiter character. All 7 formats supported:

Code site.com/wp-login.php:user:password

site.com/wp-login.php:user;password

site.com/wp-login.php;user;password

site.com/wp-login.php#user#password

site.com/wp-login.php@user@password

site.com/wp-login.php|user|password

site.com/wp-login.php#user@password

// With scheme:

https://site.com/wp-login.php|user|password

// With port (colon in port is NOT treated as delimiter):

site.com:8080/wp-login.php|user|password

// Subdirectory install:

site.com/blog/wp-login.php|user|password

// Passwords with delimiter characters are preserved:

site.com|admin|p@ss:w0rd!

The parser uses the first delimiter found between URL and username, and the second occurrence of the same character between username and password. Everything after the second delimiter is the password.

Campaign Settings

Parameter	Description	Recommended
-----------	-------------	-------------

Name	Label for the campaign	Any descriptive name
------	------------------------	----------------------

Threads	Parallel workers	5–20
---------	------------------	------

Timeout (sec)	Per-request timeout	30–60
---------------	---------------------	-------

Proxy ListRotate through saved proxy list—
Plugin UploadEnable plugin upload methodif ZIP available
Injection ScriptPHP/JS code to execute after successful injectionOptional

Lifecycle: idle -> running -> paused/stopped -> done

Adding Hosts

Two methods:

Inline list — paste credentials directly in the campaign creation form

File upload — Hosts tab -> Add Hosts -> Select file. Files of any size supported (streaming, no RAM buffering)

Proxies

Go to Proxies -> New List

Open the list -> Add Proxies

Paste one URL per line:

Code http://user:pass@host:port or

Code socks5://host:port

In campaign settings, select the list. Proxies are used in round-robin

Account & Payment

All payments in USDT TRC-20 (Tron network).

Enter amount and click Request Deposit

A unique TRON address will be assigned

Send the exact amount within 20 minutes

System checks blockchain every 30 seconds. Balance credited automatically

Quick Start

Log in at /login

Top up USDT balance and purchase access (Day / Week / Month)

Create a proxy list and add proxies

Create a campaign: name, threads, timeout, proxy

Upload hosts with credentials

Configure injection (PHP script) and/or upload ZIP plugin

Click Start

Monitor results in real time

Download results or use "Clone missed"

FAQ

Can I run two campaigns at once?

No. Only one campaign can run at a time.

Why doesn't the Start button respond?

Another campaign is already running. The button will show an error with the reason.

What is "Clone missed"?

Creates a new campaign with only the Good credentials that were not injected.

"Too many uploads" error

Server limits concurrent uploads to 8. Wait a few seconds and retry.

Useful tool very handy. Especially for ppl who wana inject miners/backdoors or SEO purposes on a batch of sites..

Kinda pricey for a day tho lol..

Sticky Bot - April 13, 2026, 7:51 am

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on May 13, 2026. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Stanley - April 15, 2026, 8:51 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
