Thread: [\[100% FREE\] Long Lasting FUD Crypt \[Any EXE\] Converts EXE to .BAT/.CMD](#)

The Truman Show - April 14, 2026, 1:32 am

Hello everyone.

I coded a Crypter that provides entirely unique builds.

It converts the EXE to a BAT file, that is fully FUD -- even on VirusTotal

I will be offering this service free for a time, until I obtain enough vouches to perhaps sell the Encryptor.

I will potentially sell the source. Or licenses.

Works with any EXE.

Contact me on HackForums -- you're welcome in advance! ?

I also accept any cool tips, I'm sure you'll have success with my EXE > BAT Encryptor.

DramaKing - April 14, 2026, 5:30 am

I know someone who needs this.

(Apr 14, 2026 05:30 AM)DramaKing Wrote: [\[CITE\]](#) I know someone who needs this. Whom?

Send them my way!

I'm surprised this forum is dead. Isn't it like the "biggest hacking forum in the world" ? :S

Maybe AI has slain all my Compodre's. Anyhow let me know!

Hackers - April 14, 2026, 8:27 am

Just curious if you are utilizing certutil

That's what I prototyped a couple of years ago, over here - <https://hackforums.net/showthread.php?tid=6266404>

DeathPenalty666 - April 14, 2026, 8:29 am

i am interested

I saw this, and no I'm not. I used Cursor but I get a FUD result. When I tried yours, I noticed that certutil was getting detected (I'm pretty sure it was certutil that appeared in WD warning)

/thread if this is a problem lol

Hit me up with a link to your exe

Let me know if I should add startup (as bat file)

Cool, I'm glad you checked it out. That makes sense, not surprised to hear about certutil (in my project / not this thread here) being flagged nowadays. Thanks for the update, that's good to know.

This seems like a cool project, it'll be interesting to see what you build in the future.

You're most welcome. And thank YOU for YOUR contributions.

-- PS can anyone tell me why there's like no one online/hacking, even talking about AI on this forum? It's absolutely crazy to Me.

it's a little quiet today, but convo is a good place to meet people here in chat:

<https://hackforums.net/convo.php?action=all>

I posted some AI related threads today. I'm a whitehat guy so I don't really hack anything at all other than my own machines. I haven't been focused on security as much this year, at least here on HF...

I hear ya though. It's just how it goes. It's 2026, forums are less popular than social media and chat apps. However we have a really solid group of core users and many others that stop in frequently enough to keep the community alive.

Hopefully you stick around :)

jason123 - April 17, 2026, 8:27 pm

It would be nice to test it and see the bypassing effect.

shixr - April 18, 2026, 9:59 am

can u link ur telegram or something

Doghan - April 26, 2026, 6:41 am

Hey, could i test your FUD pls? Nice work btw

socialfrfr - April 27, 2026, 5:38 am

hey dude i cant contact you cus thi saccount is new perhaps you can post it on github?
or dm me it i would love to use it

The member account that created this thread has been closed. It's "unlikely" that he will reply.

It was back when that grapeloader stuff was going on, but when I'd tried to certutil in the past (replicating a known attack vector) windows immediately started telling me I had a virus (I just called it manually from powershell)

i am interested in this crypter so get back to me here

i want to buy your crypter, can you get back to here let's talk about it?

dfilev-bg - *June 29, 2026, 6:01 pm*

Thanks,but this tool work or not....?
