Thread: [CHEAP-AI.SHOP Burner API Keys | 65% Cheaper than Official | GPT-5.4/ CLAUDE/ GLM5](#)

Cheap AI - April 15, 2026, 11:17 pm

I keep seeing people crying because their primary Anthropic or OpenAI accounts got nuked. If you are running live red-team tests, automated jailbreaks, or heavy uncensored payloads through Claude 4.6 Opus or GPT-5.4, you are playing with fire. The big corps log every single string you send. They tie it to your real name, your IP, and your credit card. One hard policy violation and your main developer account is permanently blacklisted.

Stop putting your own hardware and identity on the frontline. Use a proxy shield. Use burner keys. If you actually want to push the baseline without Big Tech breathing down your neck, route your traffic through the underground standard: CheapAI.
Why we use them:

Raw Pipeline: They don't inject extra moral proxy-filters or "safety guards" on top of the API. What you write is exactly what hits the LLM's neural net.

Tier-1 Artillery: Instant, drop-in replacement access to the actual 2026 flagships (Claude 4.6 Sonnet/Opus, GPT-5.4 Codex, GLM-5).

Fractional Costs: You pay 65% less than the official retail API prices. You get more tries to crack the model for a fraction of the cost.

Your payloads. Their keys. Total separation.

Stop feeding your real CC to the corporate logging machine. Get your burner keys and start testing properly.
