Hi,

Lately, I've been very interested in Aleksanteri Kivimäki. I managed to find some of his social media accounts, such as X, GitHub, and Telegram.

Even as a 15 year-old, he was capable of committing major cybercrimes. However, when the Finnish National Bureau of Investigation (KRP) raided his home, the tools found on his computer were very basic. I'm just wondering what kind of tools he might have used back then, around 2014

Not yet, as I'm still at episode 1. From what I learned so far he was not that talented hacker. He used others work.

But how is it he was able to get into those circles without real skill.. LMFAO
