Thread: [Snapchat Account Takeover Pentest Service](#)

SpearFang94 - April 22, 2026, 10:04 pm

In authorized penetration testing engagements, our Snapchat hacking service demonstrates full account takeover capabilities, including the proprietary Meo hack method for bypassing Snapchat's multi-factor authentication and session protections. This involves targeted phishing with custom payloads, credential stuffing against leaked databases, session cookie hijacking via MITM proxies, and exploiting Snapchat's OAuth flows for unauthorized access.

Once control is gained, key features include:

Real-time message interception and injection: Monitor/send snaps, chats, and stories undetected.

Contact list extraction: Dump full friend lists, phone numbers, and linked social profiles.

Location tracking: Access precise geolocation data from Snap Map features.

Media vault access: Retrieve hidden photos/videos from Memories.

Device fingerprinting: Identify linked devices for multi-platform pivots.

Persistence implantation: Install custom hooks for long-term C2 via Snapchat's API.

Contact for custom or full exploit chains.
