Thread: [What is the best macos stealer/rat and were do I buy it ?](#)

HiatusVII - April 23, 2026, 9:21 pm

Been looking for ages for a macos stealer and I cant find one where do I look?

I prefer if not that expensive like fine with paying a few hundred a month for it but nothing more. I tried russian forums but I cant find reputable stealers like atomic and infinity stealer

DramaKing - April 24, 2026, 3:50 am

There's SHub Stealer. It uses SE to collect the user password and decrypt secrets.

Overlord supports mac outputs for both arm and x64. <https://github.com/vxaboveground/Overlord>

Overlord mac is good. But it asks for manual Accessibility settings. I don't think it is good method. If you have any method to bypass it, it would be great!

From what I know, there is no way around this. You can get Overlord executed with 0 prompts but if you want screen viewing, etc you HAVE to prompt for Accessibility access. So just know you can still get a rev shell with no prompts.

Sure I agree. I actively use overlord and it is one of the greatest RAT in the malware history. Even tho there is no way to bypass manual setting, If you don't solve this problem, this is useless. Anyway, I am thinking about SE method so they can do manual setting. I have a quick question. When I compile Mac Overlord, How can I set its icon?

Can you explain further on what you mean by "Bypass manual setting" if you have suggestions or things you'd want changed to make it easier for you just give me a semi detailed explanation of what you want and I can go ahead and implement it once I have time.
