Thread: [CVE-2026-41940](#)

C00Lssh - May 1, 2026, 8:36 pm

Hello,

Has any substantive technical information surfaced yet regarding CVE-2026-41940?

So far, everything publicly indexed seems to just mirror the initial advisory without much additional analysis. Haven't seen any meaningful discussion around root cause, affected code path, exploitability specifics, or whether any PoC/reproduction work is circulating privately.

Curious if anyone here has come across:

- Deeper technical writeups
- Reverse engineering / diff analysis
- Request flow analysis
- Exploit development discussion
- Any indication of private PoC circulation

Mainly trying to determine whether there's been any actual research published on this yet, or if the ecosystem is still operating off the same minimal disclosure.

Unknown - May 1, 2026, 8:57 pm

I was linked [this](#) earlier, and it seems to be the best write-up on the topic as of yet. It does cover the attack chain, but I've yet to be able to take a look at it to any meaningful degree. Presumably, someone could likely construct a PoC from what was given in the article.

C00Lssh - May 2, 2026, 1:49 am

i posted too soon.

found it, and working it
