Thread: [ShockVpn Port Setup Problem Quasar Rat](#)

cancancan01 - May 2, 2026, 7:20 am

Hello, i have a problem With ShockVpn.

I bought shock vpn and forwarded port to 5004 and tried all the things to get connection with quasar rat i tried the public ip and port-nl1-dhdjdj.nl1.shockvpn.com nl1-dhdjdj.shockvpn.com etc. i have tried all the possibilities.

Shock vpn uses wireguard and as i searched wireguard only uses UDP and i can not use openvpn With tcp but i need TCP for Quasar.

Does anybody used ShockVpn for rat or anybody can help me With that issue?

casperr - May 2, 2026, 7:23 am

Why just don't use VPS ?

cancancan01 - May 2, 2026, 7:39 am

I have used vps server from rdp.monster but they blocked my ip because of spamhouse, i have used rar and i think because of connections through ports they just blackholed my ip

And i just used mediafire to generate direct download link for dropper/stager and i got 2-3 connections i think virüs scanner from mediafire and then i kicked out from vps server

First problem: you're using Quasar. Last time anyone suggested using this completely obsolete RAT was 8 months ago as part of a large list. I'd have to go farther back to find a mention of someone using it.

WireGuard using UDP is entirely irrelevant. Every website uses TCP. You can access those, cant'cha? The idea of needing a VPN that uses TCP to encapsulate TCP traffic is nonsense. I have had no problem with using ShockVPN and Pulsar.

If you want to spin up a Docker host, I would be happy to send you a compose file for Overlord and WireGuard.

I have 2 questions for you.

Should i use ip address and port or my user id like nl1-userid.nl1.shockvpn.net when i build my client.

And i used mediafire for direct link for my stager and got spamhouse from rdp.monster what is the reason and what mistake i did for that, so i will now that i should'nt do it again.

And unfortunately i don't know how to use docker first i should learn it but thanks for your kindness.

Anyone?

Anyone?

I've never known ShockVPN to have a user id in subdomains. Check that the port is open.

cancancan01 - May 2, 2026, 9:42 am

So you have used your ip address and port only when u built rat server?

The port was open i checked it but i didn't get any connections.

I've used mediafire for staging before. I didn't know that you could still get static download URLs.

I mainly use the ShockVPN domain with Pulsar.

I mainly use the ShockVPN domain with Pulsar.

Can you please write an example of domain, With the user id i meant the config id , are you just using

nl1.shockvpn.com with example port 5006?

wc2.shockvpn.com:50001 or something like that. Maybe they changed something.

Thank you for your efforts, i am working on crypters right now i see a lot of methods on hacking forums.

I stop underground things 7 years ago and started again.

I found a method to bypass windows defender and i am working on smart screen, for smart screen people are working on ev signatures but i am pretty sure i will find a method for smart screen also without ev signature. If you want i can share my method with you for Windows defender if you need it.

Again thank you for your efforts.

Again thank you for your efforts.

I could give you a list of MOTW bypass methods. I doubt that any of them work on fully updated Windows.
