Thread: [Production-Ready Email Marketing SaaS | You can Earn up \\$20k in 6 month | Demo |](#)

jackreacher - May 4, 2026, 7:08 pm

What Is MailFlow?

MailFlow is a fully built, multi-tenant email marketing SaaS platform powered by Amazon SES. It is not a side project or MVP it is a production-grade platform with 15 complete feature modules covering the entire lifecycle of an email marketing business, from tenant onboarding through to campaign analytics. The buyer inherits a warmed Amazon SES account, a live AI campaign assistant, a complete billing system supporting both card and crypto payments, and a fully Dockerized deployment stack ready to go live on any Server.

The Core Problem It Solves:

Email marketing tools like Mailchimp and Klaviyo charge per contact or per email sent at scale. MailFlow lets you run your own white-label email marketing platform charging your own tenants your own prices while keeping delivery costs near-zero on Amazon SES (\$0.10 per 1,000 emails). This is a platform you can sell to agencies, e-commerce stores, newsletters, and SMBs who want their own managed email marketing tool.

? Key Features ([Click to View](#))

Multi-Tenant Architecture

Full data isolation between tenants, plan-based feature gating, active-tenant enforcement middleware, and subscription tier checks throughout.

Campaign Builder

Full campaign CRUD with a guided 5-step wizard (Audience -> Identity -> Message -> Delivery -> Review). Supports immediate send and scheduled delivery. Clone campaigns, run test sends, and preview before launch.

Advanced Message Composer

Three editing modes: visual design editor, raw HTML source mode, and plain text. Includes rich text controls, merge tags (first name, last name, email), image insertion, template import, and HTML sanitization.

AI Campaign Assistant (Pro/Business)

Powered by Anthropic Claude — generates complete campaign drafts from a simple prompt including campaign name, subject line variants, preview text, HTML body, and plain text body. Non-destructive apply workflow lets users review before overwriting their campaign.

Contact & Audience Management

Full contact storage, subscription status handling, suppression-aware filtering, tag-based targeting, segment support, and CSV import workflows.

Real-Time Analytics

Tracks delivered, open, click, bounce, and failed events per campaign. Live dashboard with calculated open rate, click rate, and bounce rate. Auto-refreshes on active campaigns.

Sender Identity & Verification

Verified sender management with DKIM, domain verification, and preflight readiness checks before any campaign can go live.

Billing & Payments

Stripe for card payments. Coinbase Commerce and NOWPayments for crypto. All three gateways are admin-toggable at runtime without a code deploy.

Template Library

Tenant-scoped reusable email template library with category and subject/body storage.

Deployment Infrastructure

Ships with Dockerfile, docker-compose, nginx config, PM2 ecosystem file, and an EC2 deploy script. One command to get it running.

Compliance & Security

HTML sanitization and dangerous attribute stripping, encrypted AI key storage, suppression enforcement, Zod schema validation throughout the API, and structured audit logging.

[Video: <https://www.youtube.com/watch?v=C64gD70DULA>]

What Is Included:

- Full source code (frontend + backend)
- Amazon SES console with established sending reputation
- Stripe integration and configuration (Not stripe account)
- Coinbase Commerce and NOWPayments integration (Not NowPayment account)
- AI assistant integration (Anthropic/OpenAI/OpenRouter compatible)- I'm not providing AI API
- Docker, nginx, PM2, and deploy scripts to any server.
- Admin panel with gateway and plan controls
- Full codebase walkthrough and handover support

Revenue Potential

Amazon SES costs approximately \$0.10 per 1,000 emails. At 500K emails per month across all tenants, infrastructure costs are under \$80/month. Subscription revenue at the same scale:

Plan	Price	100 users	MRR
Starter	\$29/mo	100	\$2,900
Pro	\$79/mo	100	\$7,900
Business	\$199/mo	50	\$9,950
Blended	total	250 users	\$20,750

Price: \$3000

Selling to Only 1 Person

Payment: Crypto,Paypal,CashApp,Bank Transfer

[deleted]

All Sales Will be done with MiddleMan on HackForum using contract

Admin if this is not allow here please let me know.

NB: You might be wondering "Why sell this instead of just hosting it and making money yourself?" That's a fair question. The honest answer is that I have other projects in the pipeline that require funding, and this is how I'm making that happen. What I can tell you is that whoever acquires this gets more than just the code. I will provide full hands-on support post-sale to help you modify and adapt the platform to fit your specific use case. Updates can be rolled out in batches, and I am committed to supporting you for as long as you are actively managing the project. You're not buying code and getting dropped. You're getting a builder who stays in your corner.
