Thread: [Help Crypto Currency Wallet](#)

syrianwolf85 - May 7, 2026, 2:58 am

i need to open a crypto currency Wallet without KYC and anonymous transaction and if i can loaded by card or how any suggestion ??? looking for your help

P??sonl?af - May 7, 2026, 3:22 am

Go for the wallet Exodus. No KYC needed so can be fully anonymous (with the right external steps) No idea on the card integration (or what you even mean by that)

any issues with Trust wallet ?

blacka - May 7, 2026, 9:20 am

If you just want a wallet to hold crypto and send or receive it, you should go for Exodus. But if you want to convert fiat currency into crypto without any kind of verification, I'm not really sure. You could maybe try finding a BTC ATM that requires little to no verification, depending on where you live. Normally, I just buy crypto on Kraken, then send it to a no-KYC exchange to convert it into Monero (which is encrypted) and finally send it to my Monero GUI wallet. And when you need BTC or other crypto you can just swap the monero for that cryptocurrency and send that to a new crypto wallet.

Unnecessary steps.

You can just get BTC, send to your personal wallet and use Houdini to swap to XMR directly to your own private wallet.

Since XMR can't be traced, it doesn't even matter that it was on Houdini that they have the XMR address or even your IP (can use VPN). Also Houdini supports Private Swaps.

As for [syrianwolf85](#) and asking about wallets, Exodus is meh. While it does have wide crypto support, it's also kind of iffy with how the company has been. Example is they recently got rid of XMR support. And if you use their exchange they can KYC you.

If [syrianwolf85](#) wants to just have a BTC wallet, get Electrum. I have separate wallets for BTC, LTC, TRX, XMR, and many others.

Also, if you want what I think is a good multi-wallet, I'd go with Atomic.

Many thanks boss

PecuniaWallet - May 19, 2026, 6:43 am

Well, I can offer you Pecunia Wallet ? Topping up with bank cards is unlikely, but everything else you need is there. No KYC. You can make transfers to multiple addresses in a single payment, choose a convenient fee, and, of course, accept money anonymously on your website if you need to.
