Thread: [Play-to-Earn \(Cashout proof\)](#)

**Maskin** - May 16, 2026, 3:38 pm

Play-to-earn apps have become quite popular, and there are many. I've tried plenty of them, and this is easily the best one I've used so far.

Withdrawal proof (without any referrals):  
? loading encrypted image...

The app is called [Freecash](#) and you basically earn money as you play games referred from the app.

For this to work: Games you play or have played before will not reward you.

Always 'allow' when the game asks you for "tracking between apps". This is so the Freecash app can connect to the game you download on appstore/playstore and reward you.

You get \$5 when you register with my link: [Freecash](#)  
You get an additional \$5 after your first cash out.

Withdrawal options:

PayPal

Crypto

AGC

Visa Prepaid

First withdrawal has a minimum requirement of \$20. All withdrawals after has no minimum.

I've tried it. It's a cashback site with some surveys. Never earned enough to withdraw.

Yes. I didn't try the surveys though.

I recommend checking the available rewards to maximize profits. Some games want you to reach a certain level within a set time.

One game I'm playing right now had a task to reach level 15 and make an app purchase.  
The reward for this task was ~\$6.

So I got the cheapest thing in the app which was like \$0.95 then reached level 15 quicker to get rewarded.

Just a tip :)
