Thread: [AI is getting scary](#)

ModernEHustle - May 16, 2026, 10:25 pm

I know A.I. is very helpful for jobs and certain tasks people have but this one thing stuck with me I heard in two years A.I. will be smarter than all of mankind. I think people should be WAY more scared than we are right now.

What do you guys think?

A Powerade - May 16, 2026, 11:33 pm

That seems so hard to measure. Especially since we don't have AI that can just run on its own. Every model still needs a human to at least set it up and give it instructions. So any AIs that break stuff are the result of the negligence of the person that set it up. The only ones that I am worried about are the malware models that companies are developing, because those seem to break things in new and unique ways that make huge companies scramble.

ModernEHustle - May 16, 2026, 11:34 pm

Very well put. Did you hear about the A.I. that was tasked to break out and messaged the trainer while he was eating a sandwich?

Positive - May 16, 2026, 11:44 pm

I don't think it'll get to this point any time soon. Especially with the current blockage of data centers. They can't keep up with demand.

A lot of people I know have turned their homes into agent farms (hosting quite a few agents with Mac mini's lol).

AI still has a lot to learn. And everyday we'll feed it more and more, but it still needs us to learn from.

ModernEHustle - May 16, 2026, 11:47 pm

It's scary to think of how fast it's progressed though. Deepfakes etc. I don't think people understand how powerful it really is becoming.

If there's an AI that creates, there's an AI that can detect.

I think it's great that it's progressing. I hope it can find a cure for all the things humans haven't found; so humans can take the data and fix problems we haven't been able to solve yet.

That's one of the positives of A.I.

there are negatives though, like it trying to be a therapist for example. Or that it tries to agree with whatever you say. Or the weaknesses it has.

I'd love to have a job in this field so I could better understand it.

This A.I. stuff is interesting.

This A.I. stuff is interesting.

That's a drawback for sure, but that's with anything.

Say a therapist in person... is giving you advice or listening to your issues.

Well, if Chat for example is just listening... it's the same thing as the therapist.

But when either give a response, how do you validate either?

A therapist has a license (hopefully). Chat does not.

But what or who validates a therapists license? A board? Schooling? Ethics?

AI can achieve all that.

But the question is, whose answer is right? Whose advice do you take?

It's all on how you look at it, and what you choose to do.

If you get what I mean.

*I'm tipsy trying to write this so disregard my full ramble.

No problem at all, I'm known to ramble from time to time too lol.

For me, AI is fun to watch and play with, but I won't be fully adopting it until I see where it goes.

I would never "fully" adopt it.
But I for sure use it from time to time to write back end that I don't want to sit and write, when it's the same thing over and over.

Or have it review things/check for things I missed or read over. Etc.

It's a great way to also open your mind to new things also. Things you're interested in slightly, all of a sudden become a deep dive.

A Powerade - May 17, 2026, 12:05 am

(May 16, 2026 11:55 PM)ModernEHustle Wrote: [\[CITE\]](#) like it trying to be a therapist for example. Or that it tries to agree with whatever you say.

But AI doesn't "try" to do anything. It is just predicting the most probable words based on the input supplied. So if the input asks it to be a therapist, it will do that unless there's system input that tells it to not do stuff like that.

ModernEHustle - May 17, 2026, 12:08 am

Ah, now that I think about it, it's probably good time to go dive down some rabbit hole or another.
Have a good night!

Edmond Dantes - May 17, 2026, 12:42 am

People should not forget that AI is a tool to make your life easier, your life should not depend on it !

DramaKing - May 17, 2026, 4:18 am

We've already trained AI on the sum total of all human knowledge. Copilot still gives terrible fixes to problems I'm having. Was GPT-5 a paradigm shift from GPT-4? Or will GPT-5.6 be? Will AI companies still be around like today in two years? Will we have invested everything into a boondoggle for writing non-human-sounding emails a little faster, making sloppy entertainment, and stroking our egos?

Sodan42 - May 17, 2026, 8:06 am

I am mostly worried about AI's impact on jobs.

The worst is yet to come. Then universal basic income (UBI) will become a reality, and governments will tax the shit outta the billionaire AI master race to pay for the whole thing. LOL. ?

All according to the veteran AI researcher Geoffrey Hinton. Love that guy.

MaoBing - May 17, 2026, 8:43 am

I think your worry is well founded.

Right now AI is an incredibly useful tool for mankind, at least in the wealthier parts of the world. But the rapid pace of AI evolution could turn the world on its head and increase poverty. When that genie is out of the bottle, who knows what comes next? So it is very scary. Regulation is required before it is too late.

Deany - May 17, 2026, 1:13 pm

People using AI now to make fraud returns on eBay making the OG photo look NAD lol. Wild times.

ModernEHustle - May 17, 2026, 6:29 pm

(May 17, 2026 01:13 PM)Deany Wrote: [\[CITE\]](#) People using AI now to make fraud returns on eBay making the OG photo look NAD lol. Wild times.

Keep up or get left behind I suppose lol

Phantom_NiNja - May 18, 2026, 3:56 pm

What do you guys think?

Skynet aka terminator made a huge warning about this. Most syfy movies warn about these types of things including religions.

They said don't open doors for demons which means don't open doors to technology that you cannot control or don't have a handle over because it will end up killing mankind. We have had the warnings and now we are closer than we can ever be.

waddon - May 26, 2026, 11:21 pm

those ai videos on tiktok are getting ridiculously good

ModernEHustle - May 27, 2026, 12:30 am

It scary because some of these ai company have versions of there AI that do way crazy stuff and we only got 50% access to that or less who knows

Eoid - May 27, 2026, 5:11 pm

ai wont take over anytime soon

Ryan Carter - September 2, 2026, 10:26 am

Predictions about AI becoming smarter than all humans within two years are still uncertain. I think the immediate concerns are misuse, job disruption, misinformation, and people relying on it without checking the results. We should take those risks seriously and create sensible safeguards, but panic probably won't help.

spins - September 2, 2026, 7:43 pm

Ai will cause things to become cheap, and jobs that were once needed simply won't be needed. Uber drivers and delivery will go away like the guy who use to fill gas in your tank.

clark.dll - September 2, 2026, 7:51 pm

Idk... there seems to be a lot of bureaucratic inertia with a lot of organizations. Even those who end up "utilizing" AI don't have any measurable results to show for it. In many cases, it often slows people down or creates more work down the line. Software engineering has definitely benefited from AI, at least from an output perspective, but it's also created a lot of bad code that doesn't get properly reviewed during PRs due to the sheer volume. That creates tech debt and a subsequent headache for everyone in the future..

I don't mind AI, as someone who works in IS, it can be useful for some applications but as far as I'm concerned human oversight will be necessary for the foreseeable future.

Sift - September 3, 2026, 10:38 am

If the current AI's take over the world it will be the fault of a human operator.

CyberXero - September 3, 2026, 12:23 pm

Skynet has always been in existence,

Lefty - September 5, 2026, 1:04 am

Its in a weird stage at the moment, like it is capable but not many people really utilize it. I imagine its similar to the first years of the internet, yeah its amazing but the core reason behind its inception hasn't been established yet.

and for what AI means in the future and what its potential will end up being. That scares me
